Barry's introduction to construction of buildings is an ideal learning resource for undergraduate students and those working towards similar NQF level 5 and 6 qualifications in building and construction. This title is a companion to Barry's advanced construction of buildings.

The process of constructing an infrastructure or building is known as construction. It deals with the planning, designing, and financing of the construction project. The various sectors into which construction can be classified are buildings, infrastructure, and industrial. The construction of buildings is divided further into commercial or institutional buildings and residential buildings. Some of the steps which are a part of the process of constructing buildings are developing floor plans, excavating the foundation, and building the main load-bearing structure. Finally, there is an interrelation and overlap of different fields in order to ensure that the building is structurally sound, financially possible to build, and fulfill the legal requirements. This book provides significant information of this discipline to help develop a good understanding of building construction and related fields. Those in search of information to further their knowledge will be greatly assisted by this book.

Using an innovative integrated approach, this book explores the linkages between the science of materials and the practices of construction to help future architects and builders deal more critically with the ever-increasing array of new materials and the consequent increase in the complexities of construction. This book presents and integrates the scientific principles of building materials and construction and their relationships with actual practices. Issues are covered that are relevant to every building type regardless of whether the primary material used in the building is wood, masonry, steel, or concrete. It begins with a brief treatment of building codes and standards. Since all building construction must conform to building codes as a minimum requirement, it provides full chapter coverage of structural, thermal, fire-related properties, transparency, air infiltration, water vapor, and bulk water penetration and dimensional control in buildings. It offers a flexible organization so content can be covered sequentially or in parts. The U.S. system of units is used.
