this book is not a substitution for the helicopter flight manual and should not be treated as such it is intended to give further information relating to the different sections of the flight manual and to explain the helicopter systems more clearly i have added in some extra information where i felt it would be beneficial but overall i have tried to keep the book as simple as possible while still covering all the sections in the flight manual this book will not teach you how to fly the aircraft however it will give you the necessary technical information to conduct your flight safely it is written with the new jet ranger pilot in mind it is assumed that you already hold your private pilot s licence and have limited or no previous jet ranger experience you should be familiar with flying techniques as this book will not teach you how to fly

this edition is intended to update the information on the atc system and procedures as well as cover the more recent improvements in aircraft instrumentation and avionics the performance stability and control and basic instrument flying chapters have been expanded with more partial panel recoveries and added information on spin recoveries under the hood or in actual weather
