kidney transplantation has become a routine therapeutic option for patients with end stage kidney disease globally over 16 000 to 19 000 kidney transplants are performed annually in the united states while transplant nephrologists care for transplant recipients and living donors in the perioperative period general nephrologists are expected to care for these patients after three months following their transplants the management of immunosuppressive therapy and complications associated with the transplant process is complex and requires an in depth knowledge of transplant medications drug interactions both acute and long term complications among many other transplant and non transplant related problems selection and referral of potential living donors are other processes that are vital to kidney transplantation and require the involvement of general nephrologists most general nephrologists however are not well trained in kidney transplantation and or do not care for enough kidney transplant patients to gain adequate experience to provide patients with the best possible care

laparoendoscopic donor nephrectomy for living donor kidney transplantation and utilization of marginal hepatitis c positive and older donor organs to increase deceased donor transplant opportunities

with the increased prevalence of kidney transplantation transplant recipients are being treated in a variety of clinical settings often beyond the transplant center there is a greater need for clinicians and allied healthcare professionals to have appropriate guidance on managing these patients kidney transplantation offers the latest evidence based information on the full range of dilemmas in the medical management of kidney transplant recipients before during and after transplantation beginning with the selection of patients who are candidates for transplantation this authoritative guide covers the care of the patient on the waiting list and evaluation of donors preoperative care induction and immunosuppression maintenance this wealth of new information and guidelines will serve as an important resource for the best possible care for transplant patients
