this tract is based on lecture notes for a course in mechanics that has been offered at rensselaer polytechnic institute on and off for the past twenty years the course is

intended to provide graduate students in mechanics with an understanding of electromagnetism and prepare them for studies on the interaction of the electric and magnetic fields with deformable solid continua as such it is imperative that the distinction between particle and continuum descriptions of matter be carefully made and that the distinction between that which is inherently linear and that which is intrinsically nonlinear be clearly delineated every possible effort has been made on my part to achieve these ends i wish to acknowledge the contributions of a number of students and faculty who attended the lectures over the years and who by their questions and suggestions significantly improved some of the sections this preface would not be complete if i did not point out that my interest in electromagnetism was initiated and my attitude towards the development of the equations was influenced by lectures given by the late professor r d mindlin at columbia university in the late nineteen fifties i would like to thank professor c truesdell for his helpful suggestions which i feel significantly improved the clarity and readability of the introduction and dr m g ancona for his comment concerning the clarity of an important point in sec 1 1

having researched human performance for more than twenty years a business expert shows how one important personality trait charisma can be learned and cultivated to reach seemingly impossible career goals

hans christian Ørsted 1777 1851 was one of the leading scientists of the nineteenth century having played a crucial role in founding electromagnetism unfortunately for the english speaking world almost all of his research was published in other languages particularly his native danish this book will help to elevate Ørsted to his rightful place in the history of science by finally making his most important scientific works available in english the book includes for example Ørsted s account of his revolutionary experiments in electromagnetism in 1820 he discovered that a compass needle deflects from magnetic north when an electric current is switched on or off in a nearby wire this showed that electricity and magnetism were related phenomena a finding that laid the foundation for the theory of electromagnetism and for research that later created such technologies as radio television and fiber optics the unit of magnetic field strength was named the Ørsted in his honor selections here also show the extraordinary breadth of Ørsted s interests which

range through a long and prolific career from the study of plant alkaloids and the compression of fluids to the nature of light and the natural science of beauty the writings are taken from scientific papers Ørsted s correspondence and reports of the royal danish academy of sciences and letters the book will not only draw long overdue attention to Ørsted s own work but will also shed new light on the nature of scientific study in the nineteenth century originally published in 1998 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905
