science is a difficult subject not only to learn but also to teach there are many different learning strategies lesson plans and unit plans out there for science teachers to access but i haven t seen these used 100 successfully in the classrooms i have observed part of this issue is that while many chemists want to be effective teachers they have little background in the psychology or education behind being a successful educator and it is necessary to construct a new understanding of how their students learn herring 1996 science also covers a wide range of topics from chemistry to biology to physics to earth science it is a big portion of a student s secondary schooling there is one major correlation between all of my observations thus far the students are disinterested in the content which in turn blocks them from fully being able to connect to the material presented how do we get students interested in the subject with technology advancing and the subject always changing it is difficult for teachers to agree on one way to teach science some argue that a lecture style is best for students while others argue that hands on learning is the best there are also many learning progression ideas for which order students should be presented the material lecture first or activity first scientists secondary science teachers and elementary science teachers all have different viewpoints on the matter some believe that the only way of gaining scientific knowledge is through application of inductive methods by observation and experimentation others believe that by reading and going over the textbook is the most effective method pomeroy 1993 my belief is that a mixture of these two are required for complete understanding of science as a future teacher i would like to research and create a four week unit plan on one of the most difficult sections of a high school chemistry curriculum following the ohio science standards representing compounds included in this section are formula writing nomenclature and models and shapes of structures these three things all coincide with each other and if students do not have an understanding of the first proposed topic they will not be able to understand the next for example if students cannot correctly predict the formula of a chemical compound the students will not be able to give the correct name for the compound in my experience this is the area where many teachers lose students intellectually and where the students lose interest in science all together in my unit plan i will include interactive activities for students to have hands on practice with the topic this is generally a topic that is taught in lecture form which i believe is where students become bored and disinterested in chemistry being able to be interactive helps students learn difficult material i will be researching and experimenting with different ways to incorporate several activities into the lesson to make it more interesting for the students and resulting in them gaining an understanding of writing formulas nomenclature and models and shapes of structures the proposed outcome

will be a unit plan that teachers can use in their own classrooms to gain student attention and interest in chemistry the unit plan will consist of all relevant lesson plans including standards connections objectives lesson procedures adaptations for diverse learners and web and physical materials this project will also give teachers new and creative ideas on how to present topics to their students through various teaching strategies and activities i will be testing the activities in my own organic chemistry sessions to see how the students react to them i will be able to choose which activities work the best and have the most positive student response with the use of the references listed below other reference i may find throughout the process and dr lisa borgerding i will create an effective and useful unit plan based on the ohio standards for science
