this book investigates the syntax and usage of fragments
morgan 1973 apparently subsentential utterances like a coffee please which fulfill the same communicative function as the corresponding full sentence i d like to have a coffee please even though such utterances are frequently used they challenge the central role that has been attributed to the notion of sentence in linguistic theory particularly from a semantic perspective the first part of the book is dedicated to the syntactic analysis of fragments which is investigated with experimental methods currently there are several competing theoretical analyses of fragments which rely almost only on introspective data the experiments presented in this book constitute a first systematic evaluation of some of their crucial predictions and taken together support an in situ ellipsis account of fragments as has been suggested by reich 2007 the second part of the book addresses the questions of why fragments are used at all and under which circumstances they are preferred over complete sentences syntactic accounts impose licensing conditions on fragments but they do not explain why fragments

are sometimes dis preferred provided that their usage is licensed this book proposes an information theoretic account of fragments which predicts that the usage of fragments is constrained by a general tendency to distribute processing effort uniformly across the utterance with respect to fragments this leads to two predictions which are empirically confirmed speakers tend towards omitting predictable words and they insert additional redundancy before unpredictable words

the book itself contains chapter length subject reviews on every subject tested on the ap chemistry exam as well as both sample multiple choice and free response questions at each chapter s end two full length practice tests with detailed answer explanations are included in the book

scientists challenging dominant paradigms are either ignored or attacked by the scientific mainstream this book however contains a selection of scientific papers presented at the two last giri meetings international research group on very low dose and high dilution effects the majority of these papers present results performed with succussed high dilutions homeopathic dilutions even beyond the avogadro number all presented models are classified and their interpretation is possible either in the mechanistic paradigm or in an information paradigm this new field of research introduces new scientific concepts which are supported by experimental results furthermore this nascent science is totally concerned with living organisms and as such it becomes necessary to define information brought by non molecular high dilutions this book presents brain storming work of this research group and is one of the starting points of a scientific evolution
