ac motor control and electrical vehicle applications provides a guide to the control of ac motors with a focus on its application to electric vehicles ev it describes the rotating magnetic flux based on which dynamic equations are derived the text not only deals with the induction motor but covers the permanent magnet synchronous motors pmsm additionally the control issues are discussed by taking into account the limitations of voltage and current the latest edition includes more experimental data and expands upon

the topics of inverter pulse width modulation methods loss minimizing control and vehicle dynamics various ev motor design issues are also reviewed while comparing typical types of pmsms features considers complete dynamic modeling of induction and pmsm in the rotating frame provides various field oriented controls while covering advanced topics in pmsm high speed control loss minimizing control and sensorless control covers inverter sensors vehicle dynamics driving cycles etc not just motor control itself offers a comparison between bldc surface pmsm and interior pmsm discusses how the motor produces torque and is controlled based on consistent mathematical treatments

one of a four book collection spotlighting classic articles landmark research findings and reviews in aluminum reduction technology highlighting some of the most important findings and insights reported over the past five decades this volume features many of the best original research papers and reviews on aluminum reduction technology published from 1963 to 2011 papers have been organized into seven themes 1 fundamentals 2 modeling 3 design 4 operations 5 control 6 environmental 7 alternative processes the first six themes deal with conventional hall héroult electrolytic reduction technology whereas the last theme features papers dedicated to nonconventional processes each section begins with a brief introduction and ends with a list of recommended articles for further reading enabling researchers to explore each subject in greater depth the papers for this volume were selected from among some 1 500 light metals articles selection was based on a rigorous review process among the papers readers will find breakthroughs in science as well as papers that have had a major impact on technology in addition there are expert reviews summarizing our understanding of key topics at the time of publication from basic research to advanced applications the articles published in this volume collectively represent a complete overview of aluminum reduction technology it will enable students scientists and engineers to trace the history of aluminum reduction technology and bring themselves up to date with the current state of the technology

over the past twenty years the field of carbon structures has been invigorated by the discovery of fullerenes and carbon nanotubes these nano structured carbons have attracted a tremendous interest in the fundamental properties of discrete carbon molecules leading to the discovery of novel complex crystalline and quasi crystalline materials as a consequence a variety of applications have been developed including technical and bio medical materials and miniaturized tools diamond and related nanostructures focuses on the advances in the area of diamond like carbon nanostructures hyper structures built from fullerenes and or carbon nanotube junctions and other related carbon nanostructures each chapter contributes to the topic from different fields ranging from theory to synthesis and properties investigation of these new materials this volume brings together the major findings in the field and provides a source of inspiration and understanding to advanced undergraduates graduates and researchers in the fields of physics graph theory crystallography computational and synthetic chemistry

authored by leading experts from around the world the three volume handbook of nanostructured thin films and coatings gives scientific researchers and product engineers a resource as dynamic and flexible as the field itself the first two volumes cover the latest research and application of the mechanical and functional properties of thin films an
