master s thesis from the year 2018 in the subject art architecture history of construction grade distinction queen s university belfast language english abstract the purpose of the study is to provide effectively managed constraints by defining constraints that prevent their targets and thus to increase the profitability of firms identifying and removing constraints from bottleneck activities help to reduce uncertainties in construction processes and increases the transparency of project management various continuous improvement ci strategies have been developed and applied to improve manufacturing system performance this paper studies the combination of two distinct strategies lean manufacturing lm and theory of constraint s toc for improving manufacturing system performance the research includes reviews of these two methodologies and the implementation process involved in each strategy examination of the possibilities to improve manufacturing system performance through integration of these two strategies the effectiveness of the integrated approach along with an examination of different factors recommendations and presentation of best possible management practices for the application of this integrated approach in an organization there are attempts to achieve multiple projects with common shared resources the work can be challenging managers might find themselves on project overload with continual resource shortages and difficulty in determining the most important tasks the focus of the research is on the elimination of non value added activities through an application of a management philosophy that identifies and eliminates the waste from each step in the production throughout the value stream a comparative analysis is carried out through reviews and studies regarding lean process and toc application to determine the manager s potential benefits like reduced production lead time and lesser work in process inventory

here is a state of art examination on exact and approximate algorithms for a number of important np hard problems in the field of integer linear programming which the authors refer to as knapsack includes not only the classical knapsack problems such as binary bounded unbounded or binary multiple but also less familiar problems such as subset sum and change making well known problems that are not usually classified in the knapsack area including generalized assignment and bin packing are also covered the text fully develops an

algorithmic approach without losing mathematical rigor
