active braking control design for road vehicles focuses on two main brake system technologies hydraulically activated brakes with on off dynamics and electromechanical brakes tailored to brake by wire control the physical differences of such actuators enjoin the use of different control schemes so as to be able fully to exploit their characteristics the authors show how these different control approaches are complementary each having specific peculiarities in terms of either performance or of the structural properties of the closed loop system they also consider other problems related to the design of braking control systems namely longitudinal vehicle speed estimation and its relationship with braking control system design tire road friction estimation direct estimation of tire road contact forces via in tire sensors providing a treatment of active vehicle braking control from a wider perspective linked to both advanced academic research and industrial reality

braking systems have been continuously developed and improved throughout the last years major milestones were the introduction of antilock braking system abs and electronic stability program this reference book provides a detailed description of braking components and how they interact in electronic braking systems
