this paper examines portfolio choice and asset pricing when some assets are nontraded for instance when a country cannot trade claims to its output on world capital markets when a government cannot trade claims to future tax revenues or when an individual cannot trade claims to his future wages the close relation between portfolio choice with and implicit pricing of nontraded assets is emphasized a variant of cox ingersoll and ross s fundamental valuation equation is derived and used to interpret the optimal portfolio explicit solutions are presented to the portfolio and pricing problem for some special cases including when income from the nontraded assets is a diffusion process not spanned by traded assets and affected by a state variable

we identify the relative importance of changes in the conditional variance of fundamentals which we call uncertainty and changes in risk aversion risk for short in the determination of the term structure equity prices and risk premiums theoretically we introduce persistent time varying uncertainty about the fundamentals in an external habit model the model matches the dynamics of dividend and consumption growth including their volatility dynamics and many salient asset market phenomena while the variation in dividend yields and the equity risk premium is primarily driven by risk uncertainty plays a large role in the term structure and is the driver of counter cyclical volatility of asset returns

back cover this section should include endorsements also as interest rate markets continue to innovate and expand it is becoming increasingly important to remain up to date with the latest practical and theoretical developments this book covers the latest developments in full with descriptions and implementation techniques for all the major classes of interest rate models both those actively used in practice as well as theoretical models still waiting in the wings interest rate models implementation methods and estimation issues are discussed at length by the authors as are important new developments such as kernel estimation techniques economic based models implied pricing methods and models on manifolds providing balanced coverage of both the practical use of models and the theory that underlies them interest rate modelling adopts an implementation orientation throughout making it an ideal resource for both practitioners and researchers back flap jessica james jessica james is head of research for bank one s strategic risk management group based in the uk jessica started life as a physicist at manchester university and completed her d phil in theoretical atomic and nuclear physics at christ church oxford under professor sandars after a year as a college lecturer at trinity oxford she began work at the first national bank of chicago now bank one where she still works she is well known as a speaker on the conference circuit lecturing on a variety of topics such as var capital allocation credit derivatives and interest rate modelling and has published articles on various aspects of financial modelling nick webber nick webber is a lecturer in finance at warwick business school prior to his academic career nick had extensive experience in the industrial and commercial world in operational research and computing after obtaining a phd in theoretical physics from imperial college he began research into financial options his main area of research centres on interest rate modelling and computational finance he has taught practitioner and academic courses for many years chiefly on options and interest rates front flap interest rate modelling provides a comprehensive resource on all the main aspects of valuing and hedging interest rate products a series of introductory chapters reviews the theoretical background pointing out the problems in using naïve valuation and implementation techniques there follows a full analysis of interest rate models including major categories such as affine hjm and market models and in addition lesser well known types that include consol random field and jump augmented models implementation methods are discussed in depth including the latest developments in the use of finite difference lattice and monte carlo methods and their particular application to the valuation of interest rate derivatives containing previously unpublished material interest rate modelling is a key reference work both for practitioners developing and implementing models for real and for academics teaching and researching in the field
