science education at school level worldwide faces three perennial problems that have become more pressing of late these are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students the rst problem is the increasing intellectual isolation of science from the other subjects in the school curriculum science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute as a consequence many students do not feel any ownership of these ideas most other school subjects do somewhat better in these regards for example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward moreover ideas that are of use in science are presented to

students elsewhere and then re taught often using different terminology in science for example algebra is taught in terms of $x y z$ in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where $p v t$ are used the result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable

a nursing diagnosis is defined as a clinical judgment about individual family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing interventions to achieve outcomes for which the nurse has accountability Nanda 2009 accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse sensitive outcomes nursing diagnoses are seen as key to the future of evidence based professionally led nursing care and to more effectively meeting the need of patients in an era of increasing electronic patient health records standardized nursing terminologies such as Nanda International and NOC provide a means of collecting nursing data that are systematically analysed within and across healthcare organizations and provide essential data for cost benefit analysis and clinical audit nursing diagnoses definitions and classification is the definitive guide to nursing diagnoses as reviewed and approved by Nanda International each nursing diagnosis undergoes a rigorous assessment process by Nanda International's diagnosis development committee with stringent criteria used to indicate the strength of the underlying level of evidence each diagnosis comprises a label or name for the diagnosis a definition defining characteristics risk factors and or related factors many diagnoses are further qualified by terms such as risk for effective ineffective impaired imbalanced self care deficit readiness for disturbed decreased etc the 2012 2014 edition is arranged by concept according to taxonomy I domains I.e health promotion nutrition elimination and exchange activity rest perception cognition self perception role relationships sexuality coping stress tolerance life principles safety protection comfort and growth development the 2012 2014 edition contains revised chapters on Nanda International taxonomy and slotting of diagnoses into Nanda International taxonomies diagnostic reasoning conceptual clarity and submission of new revised diagnoses new chapters are provided on the use of nursing diagnoses in education clinical practice electronic health records nursing health care administration and research a companion website hosts related resources key features 2012 2014 edition arranged by diagnostic concepts core references and level of evidence for
