this book develops and defends a novel social epistemological account of indoctrination it answers important epistemological ethical and political questions about what indoctrination is why it is epistemically harmful how it can be practiced and how we should talk about indoctrination the author presents three views related to the epistemology of indoctrination first he argues that indoctrination is most fundamentally a structural epistemic phenomenon which results in closed minded beliefs the sources of indoctrination are diverse institutional structures technological systems ideological frames and individual actions what unites them is that they lead to the systematic failure to consider seriously the relevant alternatives to what we are taught whether by accident or by design second he makes the case that indoctrination is always wrong because it disrespects agents in their capacity as epistemic agents even when it results in true belief third and finally he contends that public indoctrination ascriptions are political propaganda they function to promote political agendas which can ironically breed the conditions for indoctrination rather than forestall it the philosophy of indoctrination is an essential resource for researchers and advanced students working in social and political epistemology ethics political philosophy philosophy of education and terrorism and radicalization studies

in newton s classical mechanics time played the role of a monotonically increasing evolution parameter einstein rejected the newtonian concept and instead identified time as the fourth coordinate of a space time four vector today scientists are considering different concepts of time as a means of resolving incompatibilities between relativity and quantum mechanics some view time as an emergent property of a system rather than a fundamental property while others consider two temporal variables the purpose of this book is to examine the role of time in modern physics so that the reader gains an increased awareness of time and its place in our understanding of nature
