this atlas containing more than 300 color photos focuses on those dermatologic conditions that are most common in ethnic

skin or skin of color it includes succinct explanations of each disease process describes clinical findings and presents key information on diagnosis and treatment individual chapters are devoted to pigmentary disorders follicular disorders hair and scalp disorders eczemas papulosquamous disorders granulomatous disorders connective tissue diseases infectious diseases scarring disorders cutaneous neoplasms photodermatoses and drug eruptions the fact that this atlas covers skin disorders that affect patients of all ethnic backgrounds ensures that it will be of worldwide relevance it will serve as a valuable reference for dermatologists and a range of other health care providers

this book was written to assist the dermatologists and practitioners in the management of rare and challenging skin disorders it is the most valuable collection of such skin disorders from more than 274 outstanding contributors over 4 decades in china in this book a comprehensive coverage of about 387 conditions are illustrated by 1215 superb images and each is introduced with an initial summary of clinical characters this atlas incorporates a wide range of skin disorders from the mildest and common conditions to the most severe conditions the objective of this book is to provide readers with a clinical reference which can be easily approachable and possesses the necessary expertise to sharpen a dermatologist s diagnostic and clinical acumen

dermatopathology is both exciting and exasperating tum corneum cells this occurs in disorders of keratiniza skin has an elegant simplicity in its functions yet a tion because the process of desquamation is disturbed figure 1 1 ferocious complexity in its structure this is one of the paradoxes that underly the pathology of skin disease parakeratosis the presence of nucleated horn cells in and may go some way in explaining the multitudinous the stratum corneum normally the horn cells corneocy disorders to which the skin is subject the ready visibility tes are thin lamellae of less than 1 f lm thickness they of the skin may also help explain why straightforward contain no detectable cytoplasmic contents as these are histological examination cannot always provide an lost in the granular cell layer parakeratosis occurs when answer to a clinicians s question quite dramatic appear the process of keratinization is disturbed such as when ances may be due to alterations of the relative rates of the rate of epidermal cell production is increased as in blood flow with or without oedema in the different psoriasis so that nuclei are not broken down before the vascular plexuses or around different structures in the stratum corneum is reached and when damage occurs horizontal dimension neither of which may result in

to the upper epidermis figure 1 2 much to see histologically the inherent sampling error porokeratosis

a beautifully illustrated and comprehensive pocket atlas of clinical dermatology color atlas of dermatology is an illustrated guide to the spectrum of dermatological pathologies this easy to use book provides a wealth of practical knowledge essential both in daily practice and when planning treatment the atlas organizes the main areas of clinical dermatology in a user friendly formatpresenting short precise descriptions on the left and illustrative images on the right this text brings you the most practical and comprehensive information it begins with the basic principles of dermatological practice followed by a thorough study of each disease accompanied by techniques for diagnoses and treatment treatment procedures include surgery pharmacotherapy and the application of physical medicine methods the instructive color plates are an invaluable aid in visualizing even the most complex relationships features hundreds of detailed images of actual cases including graphic illustrations of diagnostic and therapeutic pathways valuable treatment notes of all common dermatological conditions in day to day practice all of the current scientific knowledge of dermatology combined with the classic thieme flexibook layout with a double page spread the color atlas of dermatology is a handy clinical reference for dermatologists and general practitioners as well as an excellent review tool for medical students preparing for oral exams

this superb atlas presents an unrivalled wealth of original high quality clinical photographs of almost all benign and malignant skin tumors the diverse subtypes and clinical forms including different localizations are depicted and careful attention is paid to evolution and follow up while the main focus is on the clinical presentation as reflected in the photographs diagnostic clues and management considerations are also summarized in a straightforward readily understandable way the atlas has been designed so that it will meet clinical needs and allow rapid identification of clues relevant to daily practice clinical atlas of skin tumors will be valuable for all dermatologists in training as well as for those who are already established in the profession or in allied specialties such as plastic surgery and oncology

asians comprise a diverse group of people from south asia which includes pakistan india and sri lanka south east asia singapore malaysia indonesia thailand and the philippines and north asia japan korea and china in these regions the fitzpatrick skin types iii iv and v predominate similar dermatoses involving the asian skin often take on a slightly different clinical appearance from those affecting the caucasian skin which is predominantly fitzpatrick skin types i and ii this is

mainly due to the inherent differences in melanin content and its distribution in the different races the different pigmentary response following skin inflammation and injury also contributes to the variation in the clinical picture of dermatoses encountered in asians in addition inherent genetic differences and unique cultural practices may also result in a different spectrum of skin conditions seen in asians this comprehensive atlas of dermatology contains more than 1000 high quality clinical photographs on dermatoses affecting the asian skin conditions unique to asians such as naevus of ota horiâ s naevus of fulgiâ s disease progressive macular confluent hypomelanosis and reticulate acropigmentation of kitamura as well as conditions with a geographical asia bias such as chronic arsenic poisoning and cutaneous meloidosis are well illustrated in this atlas this compilation will undoubtedly serve as a valuable reference atlas and an essential companion to the dermatology textbook to all dermatologists managing patients of asian descent

dermatology is the science responsible for the study of the skin mucous membranes oral and genital and cutaneous appendages while dermatopathology focuses on its microscopic study although the two fields are closely related in many cases the identification of dermatological diseases is mainly clinical and depends on the physician s ability and experience the purpose of this atlas which collects over 900 clinical and histological photographs in high resolution is to illustrate and describe the most frequent skin diseases on the basis of clinical cases offering a complete guide to the etiology epidemiology clinical features histologic findings and diagnosis of the main skin diseases divided into three subgroups inflammatory infectious or tumoral it represents an invaluable resource for all medical students residents clinicians and investigators learning dermatology

as both experience and evidence based findings indicate specific dermatological conditions can prove harder to diagnose in patients with darker skin tones lack of knowledge or experience can compromise effective treatment and management leading to lasting consequences for the patient this atlas strives to supplement a lack of real world experience by providing more than 800 hundred high quality photographs and illustrations help guide physicians in treating the nuances of darker skinned patient populations dr moiin s own professional experience in treating patients of color on a daily basis and the sheer volume with which he is acquainted with these diseases on darker skin enable him to provide broader insight and include a myriad of photos to better illustrate diagnoses and treatment plans photos range from common to rare diseases to

aid in delineating nuances in diseases since dermatology is a highly visual field the focus is more on the images while the text is comprehensive but concise and often bulleted to allow for practical use written for residents and practicing dermatologists and all other medical professionals atlas of black skin is an essential tool for practitioners looking to broaden the scope of their care

this visual reference covers clinical aspects of skin diseases with emphasis on accurate diagnoses it covers the aetiology clinical features diagnosis and treatment of each disease

the incidence of skin cancer has risen rapidly in recent decades and patients often present initially to practitioners in many different specialties because skin cancer can vary in clinical appearance even dermatologists may experience difficulty in reaching a clinical diagnosis for primary care physicians and physician extenders physician assistants nurses and nurse practitioners who have had very little or no formal training in dermatology the task can be still more daunting in this atlas the authors set out to provide a practical resource that will help improve the visual vocabulary of physicians and physician extenders helping them identify lesions that should be biopsied hundreds of high quality color images are included to assist the reader in the task of recognition and identification all of the common cutaneous malignancies are illustrated with a number of examples of each entity and of common mimickers in addition biopsy techniques and treatment options are presented in step by step detail with the use of high resolution clinical images and potential complications of treatment are discussed this atlas is ideal for all providers who wish to sharpen their clinical acumen and gain confidence in identifying skin cancers
