- 1 Understanding Decimal Place Values The Decimal Point The decimal point separates the whole number part from the fractional part of a number Place Value Each digit to the right of the decimal point represents a fraction with a denominator that is a power of 10 The first digit after the decimal is the tenths place 110 The second digit is the hundredths place 1100 The third digit is the thousandths place 11000 and so on Example 035 represents 3 tenths 310 and 5 hundredths 5100
- 2 Comparing and Ordering Decimals Line Up the Decimal Points When comparing decimals make sure the decimal points are aligned vertically Compare Digit by Digit Starting from the leftmost digit compare each digit in the same place value position The decimal with the larger digit in the leftmost place value is the larger decimal Zero Padding If decimals have different numbers of digits add zeros to the right of the decimal to make them have the same number of digits Example Comparing 075 and 08 Adding a zero to 08 we have 080 Since 80 is greater than 75 08 is greater than 075
- 3 Adding and Subtracting Decimals 2 Line Up the Decimal Points Just like in comparing ensure the decimal points are aligned vertically Add or Subtract Add or subtract the digits in each place value column carrying over as necessary Place the Decimal The decimal point in the answer will be aligned with the decimal points in the numbers being added or subtracted Example 1234 567 1234 567 1801
- 4 Multiplying Decimals Multiply as Whole Numbers Ignore the decimal points initially and multiply the numbers as if they were whole numbers Count Decimal Places Count the total number of decimal places in both numbers you are multiplying Place the Decimal In the product place the decimal point so that it has the same number of decimal places as you counted in the original numbers Example $0.25 \times 0.3 = 0.075$ There are a total of 3 decimal places 2 in 0.25 and 1 in 0.3 Therefore the answer is 0.075
- 5 Dividing Decimals Convert the Divisor to a Whole Number If the divisor is a decimal multiply both the divisor and the dividend by the same power of 10 to make the divisor a whole number Divide as Whole Numbers Divide the numbers as you would with whole numbers Place the Decimal The decimal point in the quotient will be placed directly above the decimal point in the dividend Example $15 \div 0.3$ Multiply both 15 and 0.3 by 10 to make the divisor a whole number $150 \div 3 = 50$ The answer is 50
- 6 Converting Fractions to Decimals Divide the Numerator by the Denominator To convert a fraction to a decimal divide the numerator by the denominator Use Long Division If the division doesnt result in a terminating decimal use long division to get a decimal approximation Example $\frac{14}{1.4} = 10$
- 7 Converting Decimals to Fractions Identify the Place Value Determine the place value of the last digit in the decimal Write the Decimal as a Fraction The numerator is the number without the decimal point and the denominator is the place value Simplify the Fraction Simplify the fraction to its lowest terms if possible Example
