ambient intelligence (AMI) is a recent paradigm emerging from artificial intelligence in which computers are used as proactive tools to assist people with their day to day activities, making their lives more comfortable. Another main goal of AMI originates from the human-computer interaction domain and focuses on offering ways to interact with systems in a more natural way by means of user-friendly interfaces. This field is evolving quickly as can be witnessed by the emerging natural language based and gesture based types of interaction. The inclusion of computational power and communication technologies in everyday objects is growing and their

embeddedness in our environments should be as invisible as possible in order for ami to be successful human interaction with computing power and embedded systems in the surroundings should be smooth and take place without people actually noticing it the only things people should notice in connection with ami are more safety comfort and wellbeing emerging in a natural and inherent way isami is the international symposium on ambient intelligence and aims to bring together researchers from the various disciplines that constitute the scientific field of ambient intelligence to present and discuss the latest results new ideas projects and lessons learned especially in terms of software and applications

it has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events it is not that the facts of history have changed no one will dispute that the battle of waterloo occurred on june 11 1815 or that the allied invasion of europe began on june 6 1944 what each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation by examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contempo rary values and societal ideals although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational cultural and economic realities hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities
