computational fluid dynamics cfd has made remarkable progress in the last two decades and is becoming an important if not inevitable analytical tool for both fundamental and practical fluid dynamics research the analysis of flow fields is important in the sense that it improves the researcher s understanding of the flow features cfd analysis also indirectly helps the design of new aircraft and or spacecraft however design methodologies are the real need for the development of aircraft or spacecraft they directly contribute to the design process and can significantly shorten the design cycle although quite a few publications have been written on this subject most of the methods proposed were not used in practice in the past due to an immature research level and restrictions due to the inadequate computing capabilities with the progress of high speed computers the time has come for such methods to be used practically there is strong evidence of a growing interest in the development and use of aerodynamic inverse design and optimization techniques this is true not only for aerospace industries but also for any industries requiring fluid dynamic design this clearly shows the matured engineering need for optimum aerodynamic shape design methodologies therefore it seems timely to publish a book in which eminent researchers in this area can elaborate on their research efforts and discuss it in conjunction with other efforts

hydroelectric energy is the most widely used form of renewable energy accounting for 16 percent of global electricity consumption this book is primarily based on theoretical and applied results obtained by the authors during a long time of practice devoted to problems in the design and operation of a significant number of hydroelectric power plants in different countries it was preferred to edit this book with the intention that it may partly serve as a supplementary textbook for students on hydropower plants the subjects being mentioned comprise all the main components of a hydro power plant from the upstream end with the basin for water intake to the downstream end of the water flow outlet
