at a time when computers are more widespread than ever intelligent interactive systems have become a necessity the term multimedia systems refers to the coordinated storage processing transmission and retrieval of multiple forms of information such as audio image video animation graphics and text the growth of multimedia services has been exponential as technological progress keeps up with the consumer s need for content the solution of one fits all is no longer appropriate for the wide ranges of users with various backgrounds and needs so one important goal of many intelligent interactive systems is dynamic personalization and adaptivity to users this book presents 37 papers summarizing the work and new research results presented at the 6th international conference on intelligent interactive multimedia systems and services kes iimss2013 held in sesimbra portugal in june 2013 the conference series focuses on research in the fields of intelligent interactive multimedia systems and services and provides an internationally respected forum for scientific research in related technologies and applications

this book is aimed at scientists technologists engineers and undergraduate and graduate students involved in analytical and process biochemistry and biotechnology it reviews the potentialities of light emitting reaction associated with the sensor approach the book introduces the concepts of sensors and biosensors and places bio and chemi luminescent sensors in the general context of biosensors it then briefly describes luminescence phenomena and provides some basic knowledge necessary for understanding and exploiting light emitting reactions these luminescence reactions important from an analytical standpoint are described also the applications of bio and chemi luminescence which make use of immobilized reagents are explained finally there is discussion of bio and chemi luminescent sensors most of them including fiber optics

wireless networks of moving objects have drawn significant attention recently these types of networks consist of a number of autonomous or semi autonomous wireless nodes objects moving with diverse patterns and speeds while communicating via several radio interfaces simultaneously to overcome current shortcomings a number of research challenges have to be addressed in this area ranging from initial conceptualization and modelling to protocols and architectures engineering and development of

suitable tools applications and services and to the elaboration of realistic use case scenarios by taking into account corresponding societal and economic aspects by applying a systematic approach the objective of this book is to assess the state of the art and consolidate the main research results achieved in this area it was prepared as the final publication of the cost action ic0906 wireless networking for moving objects winemo the book contains 15 chapters and is a show case of the main outcomes of the action in line with its scientific goals the book will serve as a valuable reference for undergraduate students post graduate students educators faculty members researchers engineers and research strategists working in this field

this textbook presents computer networks to electrical and computer engineering students in a manner that is clearer more interesting and easier to understand than other texts all principles are presented in a lucid logical step by step manner as much as possible the authors avoid wordiness and giving too much detail that could hide concepts and impede overall understanding of the material ten review questions in the form of multiple choice objective items are provided at the end of each chapter with answers the review questions are intended to cover the little tricks which the examples and end of chapter problems may not cover they serve as a self test device and help students determine how well they have mastered the chapter
