capture and reuse of project knowledge in construction an organisation s competitive advantage lies in the knowledge of its employees and the organisation s ability to harness that knowledge to meet business objectives knowledge management is recognised in the construction industry as a potential tool for providing organisational benefits but for a number of reasons particularly the project based nature of construction where teams are transient multidisciplinary and often from different organisations implementation has been only marginally successful capture and reuse of project knowledge in construction describes a methodology for the live capture of reusable project knowledge that reflects both the organisational and human dimensions of knowledge capture and reuse as well as exploiting the benefits of technology this methodology was developed in response to the

shortcomings of current practices in managing project knowledge the benefits offered by capturing and sharing knowledge immediately after it is generated and the organisational benefit of reusing knowledge within a project based environment written for all practitioners in project based industries who have struggled with the capture and reuse of knowledge on their projects it will also be of interest to students and researchers in construction management and allied disciplines

this book offers balanced coverage of the technological solutions that contribute to the design of digital textbooks and contribute to achieving learning objectives offering an emphasis on assessment mechanisms and learning theory

concrete is the most used building material its main component cement however accounts production related for up to 10 of global co2 emissions and is therefore a major contributor to human induced climate change due to its low tensile strength concrete must be further enhanced in tension with adequate reinforcement such as steel producing the latter therefore additionally impacts the environment consequently reducing the material amount for design and construction of structures thus lowering material and transport induced emissions represents a key element to climate protection in this context meeting the essential requirements sustainability serviceability durability is yet indispensable the book presents innovative optimization aided design methods for concrete structures mathematical optimization is applied to practical problems of structural concrete at each level from external through internal structure identification to cross section design it is shown how to design resource efficient structures following the flux of forces how to optimally adapt reinforcement layouts to the internal force flow and how to efficiently cope with demanding cross sectional design tasks such as biaxial bending the optimization aided design methods are discussed in detail and described vividly they are independent of standards concrete material normal to ultra high performance and reinforcement type steel fibers to carbon bars thus universally applicable the book illustrates the different approaches with numerous figures and calculation examples existing applications in structural engineering are presented to demonstrate the potential of optimization aided design concepts including ultra lightweight hybrid beams thin concrete solar collectors and improved reinforcement layouts for tunnel lining segments incl ebook as pdf

this book systematically explains the basic principles and techniques involved in the design of reinforced concrete structures it exhaustively covers the first course on the subject at b e b tech level important features exposition is based on the latest indian standard code is 456 2000 limit state method emphasized throughout the book working stress method also explained detailing aspects of reinforcement highlighted incorporates earthquake resistant design includes a large number of solved examples practice problems and illustrations the book would serve as a comprehensive text for undergraduate civil engineering students practising engineers would also find it a valuable reference source
