metals such as copper iron manganese and zinc are clearly required for proper
metabolism and development while imbalances can lead to systemic dysfunction
and disease as a result organisms have evolved complex genetic systems for the
regulation of metal levels including import export and sequestration of metals within
cells and sub cellular compartments the study of metal biology in insects has the
potential to greatly expand our understanding of metal biology the results of such
studies might point to new possible therapeutic interventions for neurological and
other human diseases as well as new strategies for insect disease vector control the
articles collected in this research topic comprise review and original research on
metal biology in insects

fish physiology physiology of elasmobranch fishes volume 34b is a useful reference
for fish physiologists biologists ecologists and conservation biologists following an
increase in research on elasmobranchs due to the plight of sharks in today s oceans
this volume compares elasmobranchs to other groups of fish highlights areas of
interest for future research and offers perspective on future problems covering
measurements and lab and field based studies of large pelagic sharks this volume is
a natural addition to the renowned fish physiology series provides needed
comprehensive content on the physiology of elasmobranchs offers a systems
