originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions the level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics at this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives the solutions in the book are

therefore elaborated with extensive notes which add value to the solutions themselves the notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems

since the publication of my book mathematical statistics shao 2003 i have been asked many times for a solution manual to the exercises in my book without doubt exercises form an important part of a textbook on mathematical statistics not only in training students for their research ability in mathematical statistics but also in presenting many additional results as complementary material to the main text written solutions to these exercises are important for students who initially do not have the skills in solving these exercises completely and are very helpful for instructors of a mathematical statistics course whether or not my book mathematical statistics is used as the textbook in providing answers to students as well as adding additional examples to the main text motivated by this and encouraged by some of my colleagues and sprINGER verlag editor john kimmel i have completed this book mathematical statistics exercises and solutions this book consists of solutions to 400 exercises over 95 of which are in my book mathematical statistics many of them are standard exercises that also appear in other textbooks listed in the references it is only a partial solution manual to mathematical statistics which contains over 900 exercises
