this volume represents the proceedings of the second international meeting on chiral
separations held at the university of surrey between the 12th and 15th of september
1989 like the preceding meeting it was jointly organised by the chromatographic
society and the robens institute of the university of surrey in response to the continued
interest in this area of separation science of particular interest to the organisers was the
very clear change in the nature of the delegates attending this second symposium as
compared with the first at the previous meeting the majority of the delegates were
composed of chromatographers with problems in the area of chiral separations who
were keen to learn as much as possible about these techniques from the handful of
recognised experts in this area in this second symposium the divide between expert
and novice was much less apparent with the latter providing many interesting and

useful contributions to the scientific programme in termt of both oral and poster presentations

antimicrobial agents form the essential shield behind which modern medicine operates however this shield is progressively weakening as antimicrobial resistance amr escalates posing a serious global health threat that affects humans and animals the spread of amr is fueled by multiple factors including misuse and overuse of antimicrobials inadequate diagnostic practices and the plasticity of microbial genomes

with antimicrobials being essential in medical care the rise of amr jeopardizes our ability to combat common infections and increases the risks associated with routine medical procedures to address this issue it is vital to invest in research covering various aspects of amr including the genetic mechanisms underlying resistance and its evolution and the surveillance of resistance and its spread in humans animals and the environment frontiers in cellular and infection microbiology aims to offer a comprehensive collection of articles delving into the genetic factors influencing amr this collection covers a broad spectrum of subjects including but not limited to epidemiological monitoring of resistance prevalence in clinical veterinary and environmental settings designing genetic strategies to address or preclude amr advancements in molecular diagnostic methodologies the identification of mechanisms of action for novel antimicrobial compounds and the exploration of novel mechanisms contributing to antimicrobial resistance manuscripts will be selected primarily based on the novelty of research findings and scientific quality we invite contributors to submit articles in one of the following types hypothesis and theory methods opinion review original research and perspectives across the following primary areas i analysis of amr in the clinical veterinary and environmental settings ii design of novel diagnostic tools to characterize amr iii identification and characterization of novel amr mechanisms iv investigation of the mechanisms of action for new antimicrobials v generation of novel genetic platforms for the screening of new antimicrobial compounds vi study of the regulatory networks controlling amr
