this report provides an overview of the mini stream assessment scoring system minisass and south african scoring system version 5 sass5 as biomonitoring techniques for assessing the ecological condition of streams and rivers based on the identification of aquatic

macroinvertebrates while minisass relies on minimally trained citizen scientists to identify macroinvertebrates at the order level sass5 utilizes expertly accredited practitioners for finer resolution even up to the family level however the reliance on citizen scientists for minisass identification introduces limitations in terms of precision accuracy and reliability to address these limitations ongoing developments within the cgia initiative on digital innovation include the creation of a minisass smartphone application an upgraded website an interactive online course and a machine learning identification algorithm to assist with photo identification additionally a revised dichotomous key has been developed to improve operator identification during minisass surveys furthermore the potential for upscaling the machine learning identification algorithm to assist in identifying the 91 family level taxa used in sass5 assessments has been explored the outcomes of these developments and explorations presented in this paper aim to enhance the overall effectiveness and reliability of both the minisass and sass5 techniques by leveraging digital innovation and incorporating machine learning technology we anticipate the efficiency accuracy and accessibility of biomonitoring assessments will significantly improve ultimately contributing to a better understanding and management of our aquatic ecosystems

the question whether and how boundaries might individuate and thereby be constitutive features of any imaginable legal order has yet to be addressed in a systematic and comprehensive manner by legal and political theory this book seeks to address this important omission providing an original contribution to the debate about law in a global setting against the widely endorsed assumption that we are now moving towards law without boundaries it argues that every imaginable legal order global or otherwise is bounded in space time membership and content the book is built up around three main insights firstly that legal orders can best be understood as a form of joint action in which authorities mediate and uphold who ought to do what where and when with a view to realising the normative point of acting together secondly that behaviour can call into question the boundaries that determine who ought to do what where and when a legality thirdly that this a legality reveals boundaries as marking a limit and to a lesser or greater extent a fault line of the respective legal order legal boundaries reveal ways of ordering the who what where and when of behaviour which have been excluded yet which remain within the range of practical possibilities accessible to the collective limits however legal boundaries also intimate an order which exceeds the range of possibilities accessible to that collective the fault line of the respective legal order careful analysis of a wide range of legal orders including nomadism roman law classical international law ius gentium multinationals cyberlaw lex

mercatoria the eu global regimes of human rights and space law validates this thesis what sense then can we make of the normativity of the law if there can be no inclusion without exclusion arguing that legal and political theories misunderstand how legal boundaries do their work of including and excluding the book develops a normative theory of legal order which is alternative to both communitarianism and cosmopolitanism
