The roadside design guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U.S. customary. This book is a guide; it is not a standard nor is it a design policy. It is intended to use as a resource document from which individual highway agencies can develop standards and policies. Although much of the material in the guide can be considered universal in its application, several recommendations are subjective in nature and may need modification to fit local conditions. However, it is important that significant deviations from the guide be based on operational experience and objective analysis. The 2011 edition of the AASHTO roadside design guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 recommended procedures for the safety performance evaluation of highway features and begins to detail the most current evaluation criteria contained under the manual for assessing safety hardware 2009. Much for the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition. AASHTO website.
