often when a new successful data processing techniques appears in one of the application areas it then proves to be useful in many other areas this was the case of optimal transportation techniques these techniques were first developed for transportation problems but now they have been shown to be successful in many statistical applications including applications to economics these techniques are the main focus of this book but this book also contain papers that use other techniques ranging from more traditional statistical approaches to more recent ones such as stochastic frontier methods multivariable quantiles random forest and deep learning applications include all aspects of economics from production including agricultural to trade including international and finances with relation to issues of crime including computer crime and cyberbullying demographics economic freedom environment health and tourism we hope that this volume will help practitioners to become better knowledgeable of the state of the art econometric

techniques especially optimal transport techniques and help researchers to further develop these important research directions we want to thank all the authors for their contributions and all anonymous referees for their thorough analysis and helpful comments the publication of this volume was partly supported by the faculty of economics of the Chiang Mai University Thailand our thanks to the leadership and staff of the Chiang Mai University for providing crucial support our special thanks to Prof. Hung T. Nguyen for his valuable advice and constant support

This book constitutes the thoroughly refereed post-proceedings of the 6th International Workshop on Agent Mediated Electronic Commerce (AMEC 2006) held in New York, NY, USA, in July 2004 as part of AAMAS 2004. The 15 revised full papers presented were carefully selected from 39 submissions during two rounds of reviewing and revision. The papers bring together novel work from such diverse fields as computer science, operations research, artificial intelligence, and distributed systems that focus on modeling, implementation, and evaluation of computational trading institutions and/or agent strategies over a diverse set of goods. They are organized in topical sections on mechanism design, trading agents, and tools.

In this book, we'll be walking hands-on in a tutorial style through the creation of an automated stock trading strategy using C and the NinjaTrader platform, as well as methods for testing out its potential success. By the end of this book, you should be able to not only create a simple trading strategy but also understand how to test it against historical market data, debug it, and even log data into a custom database for further analysis. Even if you have limited C and trading strategy experience, the examples in this book will provide a great foundation for getting into automated trading and safely testing out strategy ideas before risking real money in the market.

This book gathers outstanding papers presented at the 5th International Conference on Data Science and Applications (ICDSA 2024) organized by the Soft Computing Research Society (SCRS) and Malaviya National Institute of Technology (MNIT) Jaipur, India, from 17 to 19 July 2024.
