both students and professors typically assume that the content of introductory psychology textbooks which are empirical in nature are identical to psychology proper yet what is surprising is how many interesting psychological insights can be found in both philosophy and literature that are often not found in psychology texts such insights are clearly psychological in nature yet they do not go back to any empirical investigation it seems that basic psychology textbooks typically providing the basis for undergraduate and graduate psychology programs represent only one important dimension of psychology empirical psychology but there is no simple co extensive identity between psychology and empirical psychology the philosophical dimension of psychology a beginner s guide begins with an investigation of what constitutes the subject matter of psychology which demonstrates the aspects of psychological reality that are ignored missed or at times even theoretically denied by mainline contemporary psychology if they lack an empirical warrant such matters include inner conscious experience the world of intrinsic value as well as the higher uniquely personal dimension of human nature that is of intellect and will this book therefore offers a more complete survey of the entire sphere of psychological reality which could provide the context for more properly interpreting empirical psychological phenomena for example should we understand psychological conditioning principles within a broader context of personal freedom is a person more rightly conceived in a psychologically immanent way that is oriented simply toward the fulfillment of instincts and needs or is there as well a transcendent orientation oriented to truth and meaning should we understand psychology simply from the point of view of efficient causation or do we need to also take into account final causation it will be of interest to psychology students of either undergraduate or graduate level and of great use to those with no prior knowledge of philosophy

excerpt from a beginner's psychology in this beginners psychology i have tried to write as nearly as might be the kind of book that i should have found useful when i was beginning my own study of psychology that was nearly thirty years ago and i read bain and the mills and spencer and rabier and as much of wundt as a struggling acquaintance with german would allow curiously enough it was a paragraph in james mill most unpsychological of psychologists that set me on the introspective track though many years had to pass before i properly understood what had put him off it a book like this would have saved me a great deal of labour and vexation of spirit nowadays of course there are many introductions to psychology and the beginner has a whole library of text books to choose from still they are of varying merit and what is perhaps more important their temperamental appeal is diverse i do not find it easy to relate this new book to the older primer which will not be further revised there is change all through every paragraph has been rewritten the greatest change is however a shift of attitude i now lay less stress than i did upon knowledge and more upon point of view about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain

are intentionally left to preserve the state of such historical works

it is a conundrum that has vexed societies throughout history how do you deal with those that break the law if their aim is to evade you how do you identify them if their aim is to lie how do you interview them if they don't see their actions are wrong how do you help them to successfully reform criminal psychology is the discipline which tackles these challenges head on from the signals which give away we're lying to the psychological profiling of violent offenders this exhaustive guide written by the uk's top experts is the perfect introduction also covering policing and the much debated topic of sexual offenders and their treatment it will demonstrate how understanding the mind will help us to view modern justice from a more informed perspective

this book can be treated as an introduction to psychology there are many similar positions available nowadays nevertheless a beginners psychology is a real gem among them as one can learn from the book the biggest change one can make is to change one's own attitude any beginner may be discouraged by the amount of learning to be done the work focuses on a man who is not able to grasp the entire scope of a given field of science he believes that many hours of working with professionals will make him a master it has to be stated at this point that beginner scientists are often chaotic in their thinking it can be seen regardless of whether a person studies physics chemistry or psychology the author explains the reader the difference between fact and meaning thanks to that the recipient can truly understand what science really is every person has to understand his own point of view then comes the time to develop one's psychological system in a beginner's psychology one can come across a lot of valuable pieces of advice on becoming a better version of oneself one has to keep in mind that no individual is perfect with hard work it is possible to improve one's current situation thanks to the novel readers can understand the psychological approach to each and every friend or foe one must learn to listen and to be listened to by others thanks to psychology one is able to understand one's own i

this text gives a general introduction to the subject but in a way that demonstrates its applicability to their work and to everyday life whilst remaining academically grounded it demonstrates how psychology can make a practical difference in the real world topics covered include emotions

excerpt from a beginner s psychology psychological text books usually contain a chapter on the physiology of the central nervous system the reader will find no such chapter here for i hold and have always held that the student should get his ele mentary knowledge of neurology not at second hand from the psychologist but at first hand from the physi ologist i have added to every chapter a list of ques tions looking partly to increase of knowledge but especially to a test of the reader s understanding of what he has just read i have also added a list of references for further reading it depends upon the maturity and general mental habit of the student whether these references made as they are in many cases to authors who do not agree either with one another or with the text of the book should be followed up at once or only after the text itself has been digested the decision must be left to the instructor my own opinion is that beginners are best given one thing at a time and that the knowledge questions and the references should therefore in the ordinary run of teaching be postponed until some feeling for psychology some steadiness of psycho logical attitude has become apparent about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

the science of human nature a psychology for beginners by william henry pyle with class exercises there are at least two possible approaches to the study of psychology by teacher training students in high schools and by beginning students in normal schools one of these is through methods of teaching and subject matter the other aims to give the simple concrete facts of psychology as the science of the mind the former presupposes a close relationship between psychology and methods of teaching and assumes that psychology is studied chiefly as an aid to teaching the latter is less complicated the plan contemplates the teaching of the simple fundamentals at first and applying them incidentally as the occasion demands this latter point of view is in the main the point of view taken in the text the author has taught the material of the text to high school students to the end that he might present the fundamental facts of psychology in simple form you are beginning the study of human nature you cannot study human nature from a book you must study yourself and your neighbors this book may help you to know what to look for and to understand what you

find but it can do little more than this it is true this text gives you many facts learned by psychologists but you must verify the statements or at least see their significance to you or they will be of no worth to you however the facts considered here properly understood and assimilated ought to prove of great value to you but perhaps of greater value will be the psychological frame of mind or attitude which you should acquire the psychological attitude is that of seeking to find and understand the causes of human action and the causes consequences and significance of the processes of the human mind if your first course in psychology teaches you to look for these things gives you some skill in finding them and in using the knowledge after you have it your study should be quite worth while this book is written for young students in high schools and normal schools no knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself a study of the laws of human behavior that is the purpose of this book what is human nature like why do we act as we do how can we make ourselves different how can we make others different how can we make ourselves more efficient how can we make our lives more worth while this book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions i have not attempted to write a complete text on psychology there are already many such books and good ones too i have selected for treatment only such topics as young students can study with interest and profit i have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended readers

we live in a world of values we have material standards of comfort and moral standards of conduct and we eat and drink and dress and house our families and educate our children and carry on our business in life with these standards more or less definitely before us we approve good manners we avoid extravagance and display we aim at efficiency we try to be honest we should like to be cultivated everywhere and always our ordinary living implies this reference to values to better and worse desirable and undesirable vulgar and refined and that is the same thing as saying that our ordinary living is not scientific it is not either unscientific in the regular meaning of that word it has nothing to do with science it is nonscientific or extra scientific for science deals not with values but with facts there is no good or bad sick or well useful or useless in science when the results of science are taken over into everyday life they are transformed into values the telegraph becomes a business necessity the telephone a household convenience the motor car a means of recreation the physician works to cure the educator to fit for citizenship the social reformer to correct abuses science itself however works simply to ascertain the truth to discover the fact mr h g wells complains in a recent novel that no sick soul could find

help or relief in a modern text book of psychology of course not psychology is the science of mind not the source of mental comfort or improvement a sick soul would not go for that matter to a text book of theology it would go to some proved and trusted friend or to some wise and tender book written by one who had himself suffered so a sick body would betake itself not to the physiological laboratory but to a physician s consulting room or to a hospital
