this lecture introduces systematically into the problem of managing large data collections in peer to peer systems search over large datasets has always been a key problem in peer to peer systems and the peer to peer paradigm has incited novel directions in the field of data management this resulted in many novel peer to peer data management concepts and algorithms for supporting data management tasks in a wider sense including data integration document management and text retrieval the lecture covers four different types of peer to peer data management systems that are characterized by the type of data they manage and the search capabilities they support the first type are structured peer to peer data management systems which support structured query capabilities for standard data models the second type are peer to peer data integration systems for querying of heterogeneous databases without requiring a common global schema the third type are peer to peer document retrieval systems that enable document search based both on the textual content and the document structure finally we introduce semantic overlay networks which support similarity search on information represented in hierarchically organized and multi dimensional semantic spaces topics that go beyond data representation and search are summarized at the end of the lecture table of contents introduction structured peer to peer databases peer to peer data integration peer to peer retrieval semantic overlay networks conclusion
