from riemann hypothesis to cps geometry and back volume 1 offers a new and very intriguing approach to geometry staring from a simple assumption that the geometrical points are infinitesimal spheres crowded together in a close packing of spheres arrangement filling up the space this book investigates the patterns and structure of the space generated by these points the properties and structure of this space is described by the cps geometry volume 1 of this geometrical investigation using points distributed in space according to the close packing of spheres arrangement makes this geometry very similar with arithmetic the connection between the world of natural numbers and the cps geometry makes this approach richer and a lot more interesting to study than one would expect enjoy

the crimean khanate was often treated as a semi nomadic watered down version of the golden horde or yet another vassal state of the ottoman empire this book revises these views by exploring the khanate s political and legal systems which combined well organized and well developed institutions which were rooted in different traditions golden horde islamic and ottoman drawing on a wide range of sources including the crimean court registers from the reign of murad giray 1678 1683 the book examines the role of the khan members of his council and other officials in the crimean political and judicial systems as well as the practice of the crimean sharia court during the reign of murad giray

considers indecomposable degree n covers of riemann surfaces with monodromy group an alternating or symmetric group of degree d the authors show that if the cover has five or more branch points then the genus grows rapidly with n unless either $d \mid n$ or the curves have genus zero there are precisely five branch points and $n \mid d - 1$

about four years ago a prominent string theorist was quoted as saying that it might be possible to understand quantum mechanics by the year 2000 sometimes new mathematical developments make such understanding appear possible and even close but on the other hand increasing lack of experimental verification make it seem to be further distant in any event one seems to arrive at new revolutions in physics and mathematics every year this book hopes to convey some of the excitement of this period but will adopt a relatively pedestrian approach designed to illuminate the relations between quantum and classical there will be some discussion of philosophical matters such as measurement uncertainty decoherence etc but philosophy will not be emphasized generally we want to enjoy the fruits of computation based on the operator formulation of qm and quantum field theory in chapter 1 connections of qm to deterministic behavior are exhibited in the trajectory representations of faraggi matone chapter 1 also includes a review of kp theory and some preliminary remarks on coherent states density matrices etc and more on deterministic theory we develop in chapter 4 relations between quantization and integrability based on moyal brackets discretizations kp strings and hirota formulas and in chapter 2 we study the qm of embedded curves and surfaces illustrating some qm effects of geometry chapter 3 is on quantum integrable systems

quantum groups and modern deformation quantization chapter 5 involves the whitham equations in various roles mediating between qm and classical behavior in particular connections to seiberg witten theory arising in n 2 supersymmetric susy yang mills ym theory are discussed and we would still like to understand more deeply what is going on thus in chapter 5 we will try to give some conceptual background for susy gauge theories renormalization etc from both a physical and mathematical point of view in chapter 6 we continue the deformation quantization then by exhibiting material based on and related to noncommutative geometry and gauge theory
