if you thought hacking was just about mischief makers hunched over computers in the basement think again as seasoned author wallace wang explains hacking can also mean questioning the status quo looking for your own truths and never accepting at face value anything authorities say or do the completely revised fourth edition of this offbeat non technical book examines what hackers do how they do it and

how you can protect yourself written in the same informative irreverent and entertaining style that made the first three editions hugely successful steal this computer book 4 0 will expand your mind and raise your eyebrows new chapters discuss the hacker mentality social engineering and lock picking exploiting p2p file sharing networks and how people manipulate search engines and pop up ads to obtain and use personal information wang also takes issue with the media for hacking the news and presenting the public with self serving stories of questionable accuracy inside you ll discover how to manage and fight spam and spyware how trojan horse programs and rootkits work and how to defend against them how hackers steal software and defeat copy protection mechanisms how to tell if your machine is being attacked and what you can do to protect it where the hackers are how they probe a target and sneak into a computer and what they do once they get inside how corporations use hacker techniques to infect your computer and invade your privacy how you can lock down your computer to protect your data and your personal information using free programs included on the book s cd if you ve ever logged onto a website conducted an online transaction sent or received email used a networked computer or even watched the evening news you may have already been tricked tracked hacked and manipulated as the saying goes just because you re paranoid doesn t mean they aren t after you and as wallace wang reveals they probably are the companion cd contains hundreds of megabytes of 100 free hacking and security related programs like keyloggers spyware stoppers port blockers ip scanners trojan horse detectors and much much more cd compatible with windows mac and linux

in his 1984 turing award lecture ken thompson described a sophisticated trojan horse attack on a compiler that is undetectable by any search of the compiler source code the object of the compiler trojan horse is to modify the semantics of the high order language in a way that breaks the security of a trusted system generated by the compiler the trojan horse thompson described is a form of virus i e it is self reproducing but it has other characteristics that differentiate it from viruses that exploit the implementation details of a computer system first the self reproduction is symbiotic the trojan horse depends on the source text of the legitimate compiler for its continued existence the virus only reproduces itself in the output stream of the compiler when the compiler is compiling itself thus destroying the original virus a second difference is the relative portability of the virus to different systems the trojan horse thompson described is less dependent on the design details of a particular machine because it exploits the portability of high order languages a final difference is the location of the virus in the executable file the compiler trojan horse is inserted in a place that is hard to search in mid file while this is possible for any form of virus it is more difficult for viruses that do not have the compiler s functions at their disposal in his lecture thompson asserted that no amount of source level verification or scrutiny will protect you from using untrusted code however this paper describes a technique that will remove such trojan horses when used in conjunction with high order language source code analysis the remainder of the paper explains why this class of trojan horse virus is important for trusted systems describes the defense against it in detail gives a brief sketch of some countermeasures and concludes with some applications of the techniques described to building trusted systems
