this volume constitutes the refereed proceedings of the 10th international symposium on experimental algorithms sea 2011 held in kolimpari chania crete greece in may 2011 the 36 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 83 submissions and present current research in the area of design analysis and experimental evaluation and engineering of algorithms as well as in various aspects of computational optimization and its applications

this book describes applications of jaya and rao algorithms on real case studies concerning different renewable energy sources in the last few decades researchers have focused on renewable energy resources like solar energy bio energy wave energy ocean thermal energy tidal energy geothermal energy and wind energy this has resulted in the development of new techniques and tools that could harvest energy from renewable energy sources many researchers and scientists have focused on developing and optimizing the energy systems to extract and utilize renewable energy more efficiently in this book recently developed jaya and rao rao 1 rao 2 and rao 3 algorithms are introduced for single and multi objective optimization

of selected renewable energy systems the results of applications of the different versions of jaya and rao algorithms are compared with the other optimization techniques like ga nsga ii pso mopso abc etc and the performance of the jaya and rao algorithms is highlighted compared to other optimization algorithms in the case of renewable energy systems the book also includes the validation of different versions of the jaya and rao algorithms through the application to complex single and multi objective unconstrained benchmark functions the algorithms and computer codes of different version of jaya and rao algorithms are included in the book that will be very much useful to readers in industry and academic research

the u s healthcare system is in complete chaos disarray medical costs have increased significantly over the past 6 years with 70 increase for deductibles and 24 or more for health insurance premiums all the while workers earnings have either not increased or if they did the pay raises were for less than the increase in the cost of medical care the situation is unsustainable and the public wants the system fixed this book offers ways of fixing the problems in healthcare healthcare s out sick predicting a cure solutions that work first defines the healthcare in crisis problem through real patient experiences the book describes the difficulties of getting through the maze of complexity among the plethora of silo providers which make up the industry the heart of the book provides readers with a comprehensive solution that can work a disruption that is necessary to provide americans the medical care they need without the us public and healthcare providers and payors going into bankruptcy insolvency or closure this book delves into digitized medicine payor and provider reimbursement models and value based healthcare delivery it also includes a philosophy or mode of thinking and operation for the solutions that are needed for diagnosis effective cost effective and time efficient healthcare delivery of which digitized medicine value based care and payor reimbursement modes are just some of the factors the authors propose that the real solution involves having the patient at the center of the issues and changing from an archaic gold standard way of thinking to a predictive analytic thinking where one gets at the real truth by doing real science that in the end becomes effective not only for the population but for the individual person this all leads to real person centered and person directed medicine and healthcare delivery

delineating the tremendous growth in this area the handbook of approximation algorithms and metaheuristics covers fundamental theoretical topics as well as advanced practical applications it is the first book to comprehensively study both approximation algorithms and metaheuristics starting with basic approaches the handbook presents the methodologies to design and analyze efficient approximation algorithms for a large class of problems and to establish inapproximability results for another class of problems it also discusses local search neural networks and metaheuristics as well as multiobjective problems sensitivity analysis and stability after laying this foundation the book applies the methodologies to classical problems in combinatorial optimization computational geometry and graph problems in addition it explores large scale and emerging applications in networks bioinformatics vlsi game theory and data analysis undoubtedly sparking further developments in the field this handbook provides the essential techniques to apply approximation algorithms and

metaheuristics to a wide range of problems in computer science operations research computer engineering and economics armed with this information researchers can design and analyze efficient algorithms to generate near optimal solutions for a wide range of computational intractable problems

algorithms and programming is primarily intended for a first year undergraduate course in programming it is structured in a problem solution format that requires the student to think through the programming process thus developing an understanding of the underlying theory the book is easily readable by a student taking a basic introductory course in computer science as well as useful for a graduate level course in the analysis of algorithms and or compiler construction each chapter is more or less independent containing classical and well known problems supplemented by clear and in depth explanations the material covered includes such topics as combinatorics sorting searching queues grammar and parsing selected well known algorithms and much more students and teachers will find this both an excellent text for learning programming and a source of problems for a variety of courses

the traveling salesman problem is central to the area of combinatorial optimization and it is through this problem that many of the most important developments in the area have been made this book focuses on essential ideas through them it illustrates all the concepts and techniques of combinatorial optimization concisely but comprehensively the extensive reference list and numerous exercises direct the reader towards related fields and give results each of the twelve chapters in this volume is concerned with a specific aspect of the traveling salesman problem and is written by an authority on that aspect it is hoped that the book will serve as a state of the art survey of the traveling salesman problem which will encourage further investigations and that it will also be useful for its comprehensive coverage of the techniques of combinatorial optimization

this is the third in a series of conferences devoted primarily to the theory and applications of artificial neural networks and

genetic algorithms the first such event was held in innsbruck austria in april 1993 the second in ales france in april 1995 we are pleased to host the 1997 event in the mediaeval city of norwich england and to carry on the fine tradition set by its predecessors of providing a relaxed and stimulating environment for both established and emerging researchers working in these and other related fields this series of conferences is unique in recognising the relation between the two main themes of artificial neural networks and genetic algorithms each having its origin in a natural process fundamental to life on earth and each now well established as a paradigm fundamental to continuing technological development through the solution of complex industrial commercial and financial problems this is well illustrated in this volume by the numerous applications of both paradigms to new and challenging problems the third key theme of the series therefore is the integration of both technologies either through the use of the genetic algorithm to construct the most effective network architecture for the problem in hand or more recently the use of neural networks as approximate fitness functions for a genetic algorithm searching for good solutions in an incomplete solution space i e one for which the fitness is not easily established for every possible solution instance
