the scholastic forum series on mathematical analysis for scientists and engineers covers seven key areas namely an introduction to mathematical analysis series no 1 calculus review series no 2 linear equations series no 3 non linear equations series no 4 data analysis and statistics series no 5 numerical calculus series no 6 and advanced topics in analysis series no 7 these are designed to bridge the gap between having mathematical skills and actually applying them if recently or years ago you took mathematics courses that are pre requisites to the technical courses in your major and need help in figuring out when or how to apply the math skills in your present undertakings the scholastic forum series is for you the series nos 5 focusses on data analysis in the sciences and engineering model formulation and the solution of model equations cannot be deemed a success until experimental validation has been obtained it is common therefore to generate considerable data in the course of experimentation which must be analyzed to establish the validity of the proposed model the series on data analysis covers the fundamentals of probability and statistics correlation and regression analyses part of the series deals with data manipulation where the main concern is to determine intermediate values from data tables particular attention is paid to cubic splines which give a smooth curve fit to discrete numerical data

this paper is the latest in the scotland analysis series and explores how an integrated domestic environment for research in publicly funded institutions supports the uk's including scotland's excellent and thriving research base which is vital for innovation and economic success an independent scottish state would become responsible for deciding how much to spend on research activity and how to distribute research funding in order to replace the 2012/13 level of research council expenditure in scotland 307 million the government of an independent scottish state would have to spend 0.23 per cent of 2012 gdp on research or seek additional funding from elsewhere such as overseas businesses or charities businesses and research charities could however face additional administrative burdens created by divergences in regulatory regimes and tax jurisdictions meaning funding projects in both the continuing uk and an independent scottish state could become more complex uk national institutions would operate on behalf of the continuing uk as before but would have no power or obligation to act in or on behalf of an independent scottish state in the event of independence the single strategic and highly integrated research framework would be likely to diverge as an

independent scottish state set and deliver its own research priorities research collaborations between the continuing uk and an independent scottish state would be international collaborations associated with levels of risk not present in domestic collaborations research excellence is also supported by the ability of researchers and staff to move freely across the uk and elsewhere thereby supporting the flow of knowledge
