recent years have seen an increasing body of literature on the economic histories of individual third world countries this book by eminent scholar Lloyd g reynolds is the first to draw together this material and fit it into a systematic framework focusing on the forty one largest countries in asia africa and latin america reynolds shows that the third world has a rich historical record of growth and that its growth patterns bear some resemblance to those observed earlier in europe and north america reynolds begins with a definition of economic growth dividing it into three phases the era of extensive growth during which population and national output increase at about the same rate the turning point a decade or two that marks the beginning of a sustained rise in per capita output and the era of intensive growth marked by a continuing rise in per capita output in chapters that deal with individual countries reynolds dates the turning point explores the attendant economic and political circumstances and outlines the key features of intensive growth from that point to the early 1980s in the rest of the book reynolds analyzes such issues as why some countries reached the turning point much earlier than others what role was played by political leadership by opportunities for foreign trade and by colonial rule or its absence why certain countries grew faster than others and what government can do to promote economic growth

why do economies grow what fixes the long run rate of growth these are some of the simplest but also hardest questions in economics growth of lack of it has huge consequences for a country s citizens but for various reasons growth theory has had long fallow patches happily this is changing in 1956 robert solow developed what became the standard neo classical model of economic growth countries grow on this theory by accumulating labour and capital adding either obeys diminishing returns the more labour or capital you already have the more you need for a further given jump in output one consequence is that an economy with less capital ought to outgrow one with more generally they do another is that growth should eventually drop to zero awkwardly it stays positive to save the theory long run growth was explained by an outside factor technical innovation which is not in the growth function itself hence the label exogenous for the solow family of models partial as it was the solow model won wide acceptance and growth theory slumbered for three decades then came two

changes one was an attempt to add technical change and other factors to labour and capital within the growth function so that the model might predict long run growth without leaning on outside residuals the so called endogenous approach the other was a huge number of factual studies barro and sala i martin explain all this and more with admirable clarity and much demanding maths in the first modern textbook devoted to growth theory the main theories are examined the stress throughout is on linking theory to fact one of three chapters on empirical work suggests how much each of several possible factors would be needed to explain differing international growth rate not an explanation itself but an indispensable set of empirical benchmarks from the economist 17 february 1996

this volume examines critical issues that all developing countries must face subjects covered include an historical insight into and description of the legal system of a third world country considerations of intellectual property regimes and suggestions for developing countries insights into the patterns of investment on a continent the bulk of whose members are third world countries and suggestions for establishing and strengthening legal arrangements in order to attract beneficial investment a critical examination of proposals made during the most recent gatt multilateral trade negotiations and pointers to global trends in the provision of financial services these chapters range from the historical to the contemporary from the descriptive to the analytical and prescriptive and from the theoretical to the empirical in toto the volume seeks to challenge scholars bureaucrats and technocrats in developing countries to critically and candidly examine the causes conditions and magnitude of underdevelopment and to propose and thoroughly critique options available to them as such the volume will be invaluable to researchers and officials involved with international development issues and third world studies
