Feeling Good: A Deep Dive into the Cognitive Techniques of David Burns Worksheets

David Burns' *Feeling Good* cognitive behavioral therapy (CBT) worksheets are widely recognized for their practical approach to managing negative emotions and thoughts. This article delves into the theoretical underpinnings, key techniques, and real-world applicability of these worksheets, incorporating academic research and practical examples.

Theoretical Foundations

Cognitive Triad and the ABC Model

Burns' work is rooted in the cognitive model of emotional disorders, proposing that our thoughts, feelings, and behaviors are interconnected. A central tenet is the cognitive triad: negative thoughts about oneself, the world, and the future. These negative cognitions trigger distressing emotions like depression and anxiety.

The ABC Model

Activating Event, Beliefs, Consequence

further clarifies this relationship. An event (A) triggers a belief (B), which then leads to a consequence (C), both emotional and behavioral. The worksheets aim to identify and challenge these maladaptive beliefs.
