this work encapsulates the papers presented at a tools 5 conference held in the university of california which covered object oriented databases reusable objects a comparison of object oriented languages object oriented user interfaces and object oriented project management

the proliferation of databases within organizations have made it imperative to allow effective sharing of information from these disparate database systems in addition it is desirable that the individual systems must maintain a certain degree of autonomy over their data in order to continue to provide for their existing applications and to support controlled access to their information thus it becomes necessary to develop new techniques and build new functionality to interoperate these autonomous database systems and to integrate them into an overall information system research into interoperable database systems has advanced substantially over recent years in response to this need the papers presented in this volume cover a wide spectrum of both theoretical and pragmatic issues related to the semantics of interoperable database systems topics covered include techniques to support the translation between database schema and between database languages object oriented frameworks for supporting interoperability of heterogeneous databases knowledge base integration and techniques for overcoming schematic discrepancies in interoperable databases in addition there are papers addressing issues of security transaction processing data modelling and object identification in interoperable database systems it is hoped the publication will represent a valuable collective contribution to research and development in the field for database researchers implementors designers application builders and users alike

the proceedings of a conference on the management of data the book contains 37 selected papers and summaries of panel discussions and video presentations covering new ideas in database technology

this book explores both the technical and management aspects of distributed computing focusing on interrelationships interfaces and integration covers rapidly advancing fields such as network client server systems distributed databases distributed transaction processing distributed operating systems distributed applications and open system standards provides different levels of discussion in each section for different audiences conceptual overviews management summaries trends and technical details includes a real life case study which is developed throughout the book

modern biological research in areas like drug discovery produces a staggering volume of data and the right modeling tools can help scientists apply it in ways never before imaginable this collection of next generation biodata modeling techniques combines innovative concepts methods and applications with case studies in genome microarray proteomics and drug discovery projects to help bioinformatics professionals develop ever more powerful data management systems in any domain breaking new ground at the intersection of life sciences and data management the book introduces practitioners to core biodata modeling techniques biological database resources and ontology concepts it explains the latest envelope pushing methods and software applications for processing integrating and managing biodata
