How does the human brain produce your private world? Critically acclaimed neuroscientist and author Susan Greenfield, who holds the prestigious position of Director of the Royal Institution in England, weaves together a thought-provoking examination of childhood experiences, primal emotions such as fear and euphoria, and the effects drugs have on our personalities to probe the most intriguing mystery facing today's scientists: how does the human brain create consciousness and a unique sense of self? In this absorbing lyrical exploration, Dr Greenfield presents a provocative new theory that treats emotions as the building blocks of our consciousness and provides an illuminating glimpse into the human brain that reveals the astonishing essence of who we are.

An elegant, engrossing Carol Tavris *Wall Street Journal* examination of what we think we know about the brain and why, despite technological advances, the workings of our most essential organ remain a mystery. I cannot recommend this book strongly enough. Henry Marsh, author of *Do No Harm*. For thousands of years, thinkers and scientists have tried to understand what the brain does. Yet despite the astonishing discoveries of science, we still have only the vaguest idea of how the brain works. In the *idea of the brain*, scientist and historian Matthew Cobb traces how our conception of the brain has evolved over the centuries. Although it might seem to be a story of ever-increasing knowledge of biology, Cobb shows how our ideas about the brain have been shaped by each era's most significant technologies. Today we might think the brain is like a supercomputer; in the past it has been compared to a telegraph, a telephone exchange, or some kind of hydraulic system.

what will we think the brain is like tomorrow when new technology arises the result is an essential read for anyone interested in the complex processes that drive science and the forces that have shaped our marvelous brains
