this book brings together over 40 papers presented at the 1992 international construction conflict management resolution conference held in manchester uk six themes are covered including alternative dispute resolution conflict management claims procedures litigation and arbitration international construction and education and the future with papers from arbitrators architects barristers civil engineers chartered surveyors and solicitors this book represents the first multi disciplinary body of knowledge on construction conflict and will act as a unique source of reference for both legal and construction professionals

conflict resolution holds the promise of freeing approaches and policies with regard to politics of identity from the fatalistic grip of realism while the conceptual literature on identity and conflicts has moved in this alternative direction conflict resolution practice continues to rely on realist frames and acts as an unwanted auxiliary to traditional international relations perpetuation of conflict discourses marginalization and exclusion of affected populations are widespread they are caused by the overreliance of conflict resolution practice on the binary frames of classic ir paradigms and also by the competitive and hierarchical relationships within the field philip gamaghelyan relies on participatory action research and collective autoethnography to expose patterns of exclusion and marginalization as well as the paradoxical reproduction of conflict promoting frames in current conflict resolution practice applied to the nagorno karabakh and syrian crises he builds on the work of postmodernist scholars on reflective practice and on discourse analysis to explore alternative and inclusive strategies with a transformative potential the ir discipline that has dominated policymaking is only one possible lens and often a deficient one for defining preventing or resolving contemporary conflicts wrapped in identity politics other conceptual frameworks can help to rethink our understanding of identity and conflicts and reconstruct them as performative and not static phenomena these transformative frameworks are increasingly influential in the conflict resolution field and can be applied to policymaking

this book constitutes the thoroughly refereed postproceedings of the 18th international workshop on algebraic development techniques wadt 2006 held in la roche en ardenne belgium june 2006 the 10 revised full papers focus on the algebraic approach

to the specification and development of systems and address topics such as formal methods for system development specification languages and methods and distributed and mobile systems

gis and environmental modeling progress and research issues michael f goodchild louis t steyaert bradley o parks carol johnston david maidment michael crane and sandi glendinning editors with growing pressure on natural resources and landscapes there is an increasing need to predict the consequences of any changes to the environment modelling plays an important role in this by helping our understanding of the environment and by forecasting likely impacts in recent years moves have been made to link models to geographical information systems to provide a means of analysing changes over an area as well as over time gis and environmental modeling explores the progress made to date in integrating these two software systems approaches to the subject are made from theoretical technical as well as data stand points the existing capabilities of current systems are described along with important issues of data availability accuracy and error various case studies illustrate this and highlight the common concepts and issues that exist between researchers in different environmental fields the future needs and prospects for integrating gis and environmental models are also explored with developments in both data handling and modelling discussed the book brings together the knowledge and experience of over 100 researchers from academic commercial and government backgrounds who work in a wide range of disciplines the themes followed in the text provide a fund of knowledge and guidance for those involved in environmental modelling and gis the book is easily accessible for readers with a basic gis knowledge and the ideas and results of the research are clearly illustrated with both colour and black and white graphics
