for anyone interested in the history and effects of the introduction of so called modern mathematics

or *mathématique moderne* or new mathematics etc this book by dirk de bock and geert vanpaemel is essential reading the two authors are experienced and highly qualified belgian scholars and the book looks carefully at events relating to school mathematics for the period from the end of world war ii to 2010 initially the book focuses on events which helped to define the modern mathematics revolution in belgium before and during the 1960s the book does much more than that however for it traces the influence of these events on national and international debates during the early phases of the reform by providing readers with translations into english of relevant sections of key continental documents outlining the major ideas of leading continental scholars who contributed to the *mathématique moderne* movement this book makes available to a wide readership the theoretical social and political backdrops of continental new mathematics reforms in particular the book focuses on the contributions made by belgians such as paul libois willy servais frédérique lenger and georges papy the influence of modern mathematics fell away rapidly in the 1970s however and the authors trace the rise and fall from that time into the 21st century of a number of other approaches to school mathematics in belgium in other western european nations and in north america in summary this is an outstanding landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary sources

this book resulted from two reports published in 1928 and 1932 of the committee on rational transformations established by the national research council the purpose of the reports was to give a comprehensive survey of the literature on the subject each chapter is regarded as a separate unit that can be read independently

the international new math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century it attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations after garnering much initial support it began to attract criticism but as bill jacob and the late jerry becker show in chapter 17 some of the effects became entrenched this volume edited by professor dirk de bock of belgium provides an outstanding overview of the new math modern mathematics movement chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations the first few chapters show how the initial leadership came from mathematicians in european nations and in the united states of america the background leaders in europe were caleb gattegno and members of a mysterious group of mainly french pure mathematicians who since the 1930s had published under the name of a fictitious nicolas bourbaki in the united states there emerged during the 1950s various attempts to improve u s mathematics curricula and teaching especially in secondary schools and colleges this side of the story climaxed in 1957 when the soviet union succeeded in launching sputnik the first satellite undoubtedly this is a

landmark publication in education the foreword was written by professor bob moon one of a few other scholars to have written on the new math from an international perspective the final epilogue chapter by professor geert vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
