teaching is characterized by complex interactions therefore it is difficult to make global statements about a teaching sequence however methods that aim at a global assessment of teaching have often been used in indicator based lesson observation it remains unclear how reliable global assessments of entire lesson sequences are since no statements can be made about dynamic processes taking place one approach is the state space grids ssg developed by hollenstein 2013 these make it possible to relate the development of two teaching characteristics to each other over time to visualize dynamic processes however there is no suitable way to numerically capture the relationship between indicators e g to compare such moment to moment assessments with global assessments the aim of this work is therefore to extend the ssg approach to advanced state space grids with mathematically based parameters to test their practicability to compare them with global assessments of entire teaching sequences and to investigate their applicability to physics teaching numerical and graphical elements are added to the ssg plot these include new
