an unusual study of human perceiving from the perspective of an ecological psychology that explicitly incorporates a phenomenology of consciousness

this book describes and proposes an unusual integrative approach to human perception that qualifies as both an ecological and a phenomenological approach at the same time thomas natsoulas shows us how our consciousness in three of six senses of the word that the book identifies is involved in our activity of perceiving the one and only world that exists which includes oneself as a proper part of it and that all of us share together with the rest of life on earth he makes the case that our stream of consciousness in the original jamesian sense minus his mental physical dualism provides us with firsthand contact with the world as opposed to our having such contact instead with theorist posited items such as inner mental representations internal pictures or sense image models pure figments and virtual objects none of which can have effects on our sensory receptors

classical phenomenology has suffered from an individualist bias and a neglect of the communicative structure of experience especially the phenomenological importance of the addressee the inseparability of i and you and the nature of the alternation between them beata stawarska remedies this neglect by bringing relevant contributions from cognate empirical disciplines such as sociolinguistics and developmental psychology as well as the dialogic tradition in philosophy to bear on phenomenological inquiry taken together these contributions substantiate an alternative view of primary i you connectedness and help foreground the dialogic dimension of both prediscursive and discursive experience between you and i suggests that phenomenology is best practiced in a dialogical engagement with other disciplines

on consciousness offers answers to the question of the very nature of consciousness and the separate question of how consciousness is related to the brain it begins with anomalous monism a doctrine seemingly to the effect that mind and brain are one thing with two kinds of properties not lawfully connected it goes on to consider the thinking of neuroscientists and then functionalists it reconsiders honderich s own union theory and the anti individualism that disconnects the mind from the brain these doctrines are examined in terms of whether they satisfy our agreed criteria for decent accounts of consciousness the book leads up to the question what is it like for you to be aware of the room you are in the bold new answer is it is for the room in a way to exist such an answer gives rise to analyses of reflective and affective consciousness as well such as thinking and feeling on consciousness respects the most resilient proposition in the history of the philosophy of mind that consciousness isn t just cells it also makes all of consciousness a proper subject for science book jacket
