Solution Lets break down the process Digestion begins in the mouth with mechanical and chemical breakdown Saliva starts the enzymatic process breaking down carbohydrates The food then travels down the esophagus to the stomach where hydrochloric acid and pepsin further digest proteins The partially digested food or chyme moves into the small intestine where the majority of nutrient absorption occurs The large intestine then absorbs water and electrolytes forming stool thats eventually eliminated This intricate system is influenced by factors like gut microbiota the trillions of bacteria residing in your gut gut motility the movement of food through the digestive tract and the nervous system

2 Solution Several factors contribute to bloating and gas. These include Food intolerances. Lactose intolerance, gluten sensitivity, and fructose malabsorption are common culprits. Eliminating or reducing these foods can often alleviate symptoms. A food diary can help identify trigger foods.

Constipation Slowed bowel movements allow gas to build up, leading to bloating. Increasing fiber intake (fruits, vegetables, whole grains), staying hydrated, and engaging in regular physical activity can help.
