we examine linear time invariant systems starting with the difference equation and applying the z transform to produce a range of filter type i e low pass high pass and bandpass the important concept of convolution is examined and here we demonstrate the usefulness of the log command in probe for giving the correct display to demonstrate the flip n slip method digital oscillators including quadrature carrier generation are then examined several filter design methods are considered and include the bilinear transform impulse invariant and window techniques included also is a treatment of the raised cosine family of filters a range of dsp applications are then considered and include the hilbert transform single sideband modulator using the hilbert transform and quad oscillators integrators and differentiators decimation and interpolation are simulated to demonstrate the usefulness of the multi sampling environment

in signals and systems sanjit mitra addresses the question what are the core concepts that undergraduate students need to learn in order to successfully continue their studies in the field straightforward easy to understand and engaging signals and systems enables students to focus on essential material by avoiding artificial signals and systems that they will never encounter in their professional careers

after an overview of major scientific discoveries of the 18th and 19th centuries which created electrical science as we know and understand it and led to its useful applications in energy conversion transmission manufacturing industry and communications this circuits and systems history book fills a gap in published literature by providing a record of the many outstanding scientists mathematicians and engineers who laid the foundations of circuit theory and filter design from the mid 20th century additionally the book records the history of the iee circuits and systems society from its origins as the small circuit theory group of the institute of radio engineers ire which merged with the american institute of electrical engineers aiee to form ieee in 1963 to the large and broad coverage worldwide ieee society which it is

today this second edition commemorating the 75th anniversary of the circuits and systems society builds upon the first edition's success by expanding the scope of specific chapters introducing new topics of relevance and integrating feedback from readers and experts in the field reflecting the evolving landscape of circuits and systems alongside the evolution of the professional society many authors from many countries contributed to the creation of this book working to a very tight time schedule the result is a substantial contribution to their enthusiasm and expertise which it is hoped readers will find both interesting and useful it is certain that in such a book omission will be found and in the space and time available much valuable material had to be left out it is hoped that this book will stimulate an interest in the marvelous heritage and contributions of the many outstanding people who worked in the circuits and systems area

this book provides comprehensive coverage of the latest trends advances in subjective and objective quality evaluation for traditional visual signals such as 2d images and video as well as the most recent challenges for the field of multimedia quality assessment and processing such as mobile video and social media readers will learn how to ensure the highest storage delivery transmission quality of visual content including image video graphics animation etc from the server to the consumer under resource constraints such as computation bandwidth storage space battery life etc

we are delighted to welcome readers to the proceedings of the 6th pacific rim conference on multimedia pcm the first pcm was held in sydney australia in 2000 since then it has been hosted successfully by beijing china in 2001 hsinchu taiwan in 2002 singapore in 2003 and tokyo japan in 2004 and finally jeju one of the most beautiful and fantastic islands in korea this year we accepted 181 papers out of 570 submissions including regular and special session papers the acceptance rate of 32 indicates our commitment to ensuring a very high quality conference this would not be possible without the full support of the excellent technical committee and anonymous reviewers that provided timely

and insightful reviews we would therefore like to thank the program committee and all reviewers the program of this year reflects the current interests of the pcm s the accepted papers cover a range of topics including all aspects of multimedia both technical and artistic perspectives and both theoretical and practical issues the pcm 2005 program covers tutorial sessions and plenary lectures as well as regular presentations in three tracks of oral sessions and a poster session in a single track we have tried to expand the scope of pcm to the artistic papers which need not to be strictly technical
