- 1 Know Your Camera DSLR vs Mirrorless DSLRs Digital Single Lens Reflex use a mirror to reflect the image through the viewfinder while mirrorless cameras use an electronic viewfinder Both offer great image quality so choose based on your budget and personal preference Understanding Camera Modes Auto The simplest option lets the camera handle all settings automatically Program Offers basic control over settings like ISO and aperture ShutterPriority You set the shutter speed and the camera adjusts aperture accordingly AperturePriority You set the aperture and the camera adjusts shutter speed Manual You control both aperture and shutter speed Essential Camera Controls Shutter Button Triggers the camera to capture the image Zoom Ring Adjusts the focal length of the lens Exposure Compensation Finetunes the overall brightness of the image ISO Button Controls the cameras sensitivity to light Mode Dial Selects the shooting mode Auto Program ShutterPriority AperturePriority Manual Review Button Lets you view the image you just captured
- 2 Mastering Exposure Aperture Controls the size of the lens opening affecting depth of field how much of the image is in focus A wide aperture low fnumber creates shallow depth of field blurring the background while a narrow aperture high fnumber creates a sharp focus throughout the image Shutter Speed Determines how long the shutter stays open controlling the amount of light 2 reaching the sensor A fast shutter speed freezes motion while a slow shutter speed blurs movement ISO Represents the cameras sensitivity to light Higher ISO settings allow you to shoot in low light but can introduce graininess noise in the image Lower ISO settings produce cleaner images but require more light The Exposure Triangle These three elements aperture shutter speed and ISO work together to determine the overall exposure of the image Experiment with different settings to understand how they affect your photos
- 3 Composition Rules for Stunning Shots Rule of Thirds Imagine your image divided into nine equal squares Place important elements along the lines or intersections for a more pleasing composition Leading Lines Use lines within the scene to draw the viewers eye to the subject Symmetry and Balance Create a visually appealing composition using symmetry asymmetry or balancing different elements in the frame

Framing Use natural elements like trees or doorways to frame your subject and create a sense of depth Foreground Middleground and Background Incorporate elements in each section of the frame to create depth and interest

4 Light The Key Ingredient Natural Light The most flattering light for photography offering soft shadows and warm tones Golden Hour The hour after sunrise and before sunset providing warm soft light ideal for portraits Blue Hour The hour after sunset and before sunrise offering cool bluish tones Artificial Light Use available light sources or flashes to enhance your photography Flash Photography Can be used to illuminate subjects in low light or create dramatic effects Continuous Lighting Offers consistent light making it useful for studio photography Understanding Light Direction The direction of light affects the mood and shadows in your image Backlight Creates silhouettes and highlights the subjects edges Sidelight Offers dramatic shadows and dimension Front Light Flattens the subject reducing shadows
