this book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the iucn ssc re introduction specialist group using an issue based framework that purposely avoids a structure based on case studies the book s

central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives issues covered include husbandry and intensive management monitoring and genetic and health management although taxonomically neutral there is a recognised dominance of bird and mammal studies that reflects the published research in this field the structure and content are designed for use by people wanting to bridge the research management gap such as conservation managers wanting to expand their thinking about reintroduction related decisions or researchers who seek to make useful applied contributions to reintroduction

historically the conservation of forests and wildlife has focused on the creation of national parks and reserves however only 9 of protected areas are larger than 14 000 hectares likely making them too small to conserve ecosystem services and prevent loss of wide ranging keystone species such as elephant and leopard new approaches are needed that extend conservation beyond protected area boundaries into areas where economic considerations prevail the book describes one such emerging model of conservation the integration of the private sector into partnerships to protect biodiversity and improve forest management while such partnerships are being created in nearly every sector of resource extraction detailed analyses of how such partnerships work and whether they benefit biodiversity conservation are rare using a case study from the congo basin the book examines principles of conservation and partnership and provides technical and methodological details to replicate an innovative conservation model it presents concrete solutions for expanding conservation across multi use landscapes a necessary action as industry expands to all the corners of the globe

this book demonstrates that trade offs can be very important for conservationists its various chapters show how and why trade offs are made and why conservationists need to think very hard about what if anything to do about them the book argues that conservationists must carefully weigh up and be explicit about the trade offs that they make every day in deciding what to save key features discusses the wider

non biological issues that surround making decisions about which species and biogeographic areas to prioritise for conservation focuses on questions such as what are these wider issues that are influencing the decisions we make what factors need to be included in our assessment of trade offs what package of information and issues do managers need to consider in making a rational decision who should make such decisions part of the conservation science and practice book series this volume is of interest to policy makers researchers practitioners and postgraduate students who are concerned about making decisions that include recognition of trade offs in conservation planning
