this book argues that the primary function of human thinking in language is to make judgments which are logical normative connections of concepts robert abele points out that this presupposes cognitive conditions that cannot be accounted for by empirical linguistic analyses of language content or social conditions alone judgments rather assume both reason and a unified subject and this requires recognition of a kantian type of transcendental dimension to them judgments are related to perception in that both are syntheses defined as the unity of representations according to a rule form perceptual syntheses are simultaneously pre linguistic and proto rational and the understanding kant s verstand makes these syntheses conceptually and thus self consciously explicit abele concludes with a transcendental critique of postmodernism and what its deflationary view of ontological categories such as the unified and reasoning subject has done to political thinking he presents an alternative that calls for a return to normativity and a recognition of reason objectivity and the universality of principles
