this book asserts that language is a signaling system rather than a code based in part on such research as the finding that 5 year old english and dutch children use pronouns correctly in their own utterances but often fail to interpret these forms correctly when used by someone else emphasizing the unique and sometimes competing demands of listener and speaker the author examines resulting asymmetries between production and comprehension the text offers examples of the interpretation of word order and pronouns by listeners and word order freezing and referential choice by speakers it is explored why the usual symmetry breaks down in children but also sometimes in adults gathering contemporary insights from theoretical linguistic research psycholinguistic studies and computational modeling asymmetries between language production and comprehension presents a unified explanation of this phenomenon through a lucid comprehensive review of acquisition studies on reference related phenomena *petra hendriks* builds a striking case for the pervasiveness of asymmetries in comprehension production in her view listeners systematically misunderstand what they hear and speakers systematically fail to prevent such misunderstandings she argues that linguistic theory should take stock of current psycholinguistic and developmental evidence on optionality and ambiguity and recognize language as a signaling system the arguments are compelling yet controversial grammar does not specify a one to one correspondence between form and meaning and the demands of the mapping task differ for listeners and speakers her proposal is formalized within optimality theory but researchers working outside this framework will still find it of great interest in the language as code vs language as signal debate *hendriks* puts the ball firmly in the other court *ana pérez leroux* university of toronto canada

Setting forth the state of the art, leading researchers present a survey on the fast developing field of connectionist psycholinguistics using connectionist or neural networks which are inspired by brain architecture to model empirical data on human language processing. Connectionist psycholinguistics has already had a substantial impact on the study of a wide range of aspects of language processing ranging from inflectional morphology to word recognition to parsing and language production. Christiansen and Chater begin with an extended tutorial overview of connectionist psycholinguistics which is followed by the latest research by leading figures in each area of research. The book also focuses on the implications and prospects for connectionist models of language not just for psycholinguistics but also for computational and linguistic perspectives on natural language. The interdisciplinary approach will be relevant for and accessible to psychologists, cognitive scientists, linguists, philosophers and researchers in artificial intelligence.
