excerpt from einstein the searcher his work explained from dialogues with einstein the book which is herewith presented to the public has few contemporaries of a like nature it deserves special attention inasmuch as it is illuminated by the name albert einstein and deals with a personality whose achievements mark a turning point in the development of science every investigator who enlarges our vision by some permanent discovery becomes a milestone on the road to knowledge and great would be the array of those who have defined the stages of the long avenue of research one might endeavour then to decide to whom mankind owes the greater debt to euclid or to archimedes to plato or to aristotle to descartes or to pascal to lagrange or to gauss to kepler or to copernicus one would have to investigate as far as this is possible in how far each outstanding personality was in advance of his time whether some contemporary might not have had the equal good fortune to stumble on the same discovery and whether indeed the time had not come when it must inevitably have been revealed if we then further selected only those who saw far beyond their own age into the illimitable future of knowledge this great number of celebrities would be considerably diminished we should glance away from the milestones and fix our gaze on the larger signs that denote the lines of demarcation of the sciences and among them we should find the name of albert einstein about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

this volume first published in 1921 presents a series of portraits of einstein thus offering glimpses in the character and private reflections of the man who changed the course of modern science intended neither as a biography nor as a resume of einsteinian physics einstein the searcher instead focusses on einstein's

relationship with the scientific project as he himself conceived it and so is still of contemporary significance for those puzzled by the spirit of scientific enquiry

in commentaries by whitrow w b bonner and d w sciama and reminiscences by h a einstein bertrand russell and 23 others einstein s life and thought emerge vividly from childhood to the special theory of relativity in 1905 and on through his search for the unified field theory

would you like to know the truth about albert einstein from a friend who really knew him much of what is reported by some historians about his life is consistent with his personal writings but much is conjecture based on people who never knew him and they simply made up whatever the writers thought he must be like after nearly two years of personal conversation directly with einstein i have tried to recall specific things about him which may be of interest to you he needs to be remembered for the truth about his contributions to the whole world he was indeed a rare bird

excerpt from einstein the searcher his work explained from dialogues with einstein this would in itself justify nay render imperative the writing of a book about einstein but this need has already been satisfied on several occasions and there is even now a considerable amount of literature about him at the end of this generation we shall possess a voluminous library composed entirely of books about einstein the present book will differ from most of these in that einstein here occurs not only objectively but also subjectively we shall of course speak of him here too but we shall also hear him speak himself and there can be no doubt that all who are devoted to the world thought can but gain by listening to him the title agrees with the circumstance to which this book owes its birth and in undertaking to address itself to the circle of readers as to an audience it promises much eloquence that came from einstein s own lips during hours of social intercourse far removed from academic purposes and not based on any definite scheme intended for instruction it will therefore be neither a course of lectures nor anything similar aiming at a systematic order and development nor is it a mere phonographic record for this is made impossible if for no other reason than that whoever has the good fortune to converse with this man finds every minute far too precious to waste it in snatching moments to take shorthand notes what he has heard and discussed crystallizes itself in subsequent notes and to some extent he relies on his memory which would have to be extraordinarily lax if it managed to forget the essentials of such conversations about the publisher forgotten books publishes
