a much needed reference on survey sampling and its applications that presents the latest advances in the field seeking to show that sampling theory is a living discipline with a very broad scope this book examines the modern development of the theory of survey sampling and the foundations of survey sampling it offers readers a critical approach to the subject and discusses putting theory into practice it also explores the treatment of non sampling errors featuring a range of topics from the problems of

coverage to the treatment of non response in addition the book includes real examples applications and a large set of exercises with solutions sampling and estimation from finite populations begins with a look at the history of survey sampling it then offers chapters on population sample and estimation simple and systematic designs stratification sampling with unequal probabilities balanced sampling cluster and two stage sampling and other topics on sampling such as spatial sampling coordination in repeated surveys and multiple survey frames the book also includes sections on post stratification and calibration on marginal totals calibration estimation estimation of complex parameters variance estimation by linearization and much more provides an up to date review of the theory of sampling discusses the foundation of inference in survey sampling in particular the model based and design based frameworks reviews the problems of application of the theory into practice also deals with the treatment of non sampling errors sampling and estimation from finite populations is an excellent book for methodologists and researchers in survey agencies and advanced undergraduate and graduate students in social science statistics and survey courses
