as part of their research activities researchers in all areas of education develop measuring instruments design and conduct experiments and surveys and analyze

data resulting from these activities educational research has a strong tradition of employing state of the art statistical and psychometric psychological measurement techniques commonly referred to as quantitative methods these techniques cover a range of statistical tests and tools quantitative research is essentially about collecting numerical data to explain a particular phenomenon of interest over the years many methods and models have been developed to address the increasingly complex issues that educational researchers seek to address this handbook serves to act as a reference for educational researchers and practitioners who desire to acquire knowledge and skills in quantitative methods for data analysis or to obtain deeper insights from published works written by experienced researchers and educators each chapter in this handbook covers a methodological topic with attention paid to the theory procedures and the challenges on the use of that particular methodology it is hoped that readers will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area

this book presents the statistical analysis of compositional data using the log ratio approach it includes a wide range of classical and robust statistical methods adapted for compositional data analysis such as supervised and unsupervised methods like pca correlation analysis classification and regression in addition it considers special data structures like high dimensional compositions and compositional tables the methodology introduced is also frequently compared to methods which ignore the specific nature of compositional data it focuses on practical aspects of compositional data analysis rather than on detailed theoretical derivations thus issues like graphical visualization and preprocessing treatment of missing values zeros outliers and similar artifacts form an important part of the book since it is primarily intended for researchers and students from applied fields like geochemistry chemometrics biology and natural sciences economics and social sciences all the proposed methods are accompanied by worked out examples in r using the package robcompositions
