how the purposive behavior of living systems outstrips the constraints of the free energy principle since 2005 karl friston's proposal that the principle of free energy minimization underpins the purposive behavior of living agents has evolved through thousands of publications this principle's central move is to formalize the drive for self preservation in terms of a single probabilistic imperative to survive a living system must consistently exhibit the same most likely pattern of activity over time despite the simplicity of this central claim the free energy principle's complexity and rate of development have previously made it difficult to identify and evaluate in a drive to survive kathryn nave offers an extended critical analysis of the strengths and limitations of friston's proposal nave shows that the free energy principle's capacity to account for the biological origins of purposiveness is undermined by its applicability to any stable inanimate system as this triviality has become apparent so advocates have begun to reframe the free energy principle as a means to eliminate rather than explain the notion of distinctively biological purposiveness this nave proposes gets things the wrong way around the triviality of free energy minimization does not prove that there is no difference in kind between living agents and ordinary machines but rather it reflects that the framework cannot capture the intrinsic instability and unpredictability that distinguish the former

what we call growth today is in fact a tumorous growth a cancerous proliferation which is disrupting the social organism these tumours endlessly metastasize and grow with an inexplicable deadly vitality at a certain point this growth is no longer productive but rather destructive capitalism passed this point long ago its destructive forces cause not only ecological and social catastrophes but also mental collapse the destructive compulsion to perform combines self affirmation and self destruction in one we optimize ourselves to death brutal competition ends in destruction it produces an emotional coldness and indifference towards others as well as towards one's own self the devastating consequences of capitalism suggest that a death drive is at work freud initially introduced the death drive hesitantly but later admitted that he couldn't

think beyond it as the idea of the death drive became increasingly central to his thought today it is impossible to think about capitalism without considering the death drive
