the use of remote sensors for human settlement mapping and monitoring holds great promise for numerous fields of study

including urban planning and global environmental change and sustainability while the potential for this technology is difficult to measure achieving useful results at a regional or global level is but a recent accomplishment

published with isme itto and project partners fao unesco mab unep wcmc and unu inweh this atlas provides the first truly global assessment of the state of the world's mangroves written by a leading expert on mangroves with support from the top international researchers and conservation organizations this full colour atlas contains 60 full page maps hundreds of photographs and illustrations and a comprehensive country by country assessment of mangroves mangroves are considered both ecologically and from a human perspective initial chapters provide a global view with information on distribution biogeography productivity and wider ecology as well as on human uses economic values threats and approaches for mangrove management these themes are revisited throughout the regional chapters where the maps provide a spatial context or starting point for further exploration the book also presents a wealth of statistics on biodiversity habitat area loss and economic value which provide a unique record of mangroves against which future threats and changes can be evaluated case studies written by regional experts provide insights into regional mangrove issues including primary and potential productivity biodiversity and information on present and traditional uses and values and sustainable management

geomatics is a neologism the use of which is becoming increasingly widespread even if it is not still universally accepted it includes several disciplines and techniques for the study of the earth's surface and its environments and computer science plays a decisive role a more meaningful and appropriate expression is geo spatial information or geoinformation geo spatial information embeds topography in its more modern forms measurements with electronic instrumentation sophisticated techniques of data analysis and network compensation global satellite positioning techniques laser scanning etc analytical and digital photogrammetry satellite and airborne remote sensing numerical cartography geographical information systems decision support systems webgis etc these specialized fields are intimately interrelated in terms of both the basic science and the results pursued rigid separation does not allow us to discover several common aspects and the fundamental importance assumed in a search for solutions in the complex survey context the objective pursued by mario a gomarasca one that is only apparently modest is to publish an integrated text on the surveying theme containing simple and comprehensible concepts relevant to experts in geo spatial information and or specifically in one of the disciplines that compose it at the same time the book is rigorous and synthetic describing with precision the main
