5 x 8 inch blank notebook carl sagan would like this in his 1994 book *pale blue dot* carl sagan comments on what he sees as the greater significance of the photograph writing look again at that dot that s here that s home that s us on it everyone you love everyone you know everyone you ever heard of every human being who ever was lived out their lives the aggregate of our joy and suffering thousands of confident religions ideologies and economic doctrines every hunter and forager every hero and coward every creator and destroyer of civilization every king and peasant every young couple in love every mother and father hopeful child inventor and explorer every teacher of morals every corrupt politician every superstar every supreme leader every saint and sinner in the history of our species lived there on a mote of dust suspended in a sunbeam the earth is a very small stage in a vast cosmic arena think of the rivers of blood spilled by all those generals and emperors so that in glory and triumph they could become the momentary masters of a fraction of a dot think of the endless cruelties visited by the inhabitants of one corner of this pixel on the scarcely distinguishable inhabitants of some other corner how frequent their misunderstandings how eager they are to kill one another how fervent their hatreds our posturings our imagined self importance the delusion that we have some privileged position in the universe are challenged by this point of pale light our planet is a lonely speck in the great enveloping cosmic dark in our obscurity in all this vastness there is no hint that help will come from elsewhere to save us from ourselves the earth is the only world known so far to harbor life there is nowhere else at least in the near future to which our species could migrate visit yes settle not yet like it or not for the moment the earth is where we make our stand it has been said that astronomy is a humbling and character building experience there is perhaps no better demonstration of the folly of human conceits than this distant image of our tiny world to me it underscores our responsibility to deal more kindly with one another and to preserve and cherish the pale blue dot the only home we ve ever known

please note this is a companion version not the original book sample book insights 1 the voyager 1 spacecraft was sent to explore saturn in 1981 and in 1990 it took a picture of the earth as a point of light the picture was taken from saturn so the earth would appear too small for voyager to make out any detail 2 the earth was seen from a hundred thousand times farther away than ever before from saturn in 1981 to uranus in 1986 to 1989 when both spacecraft had passed the orbits of neptune and pluto the picture showed us that we are insignificant beings on a insignificant planet 3 the images of the earth and five other planets were recorded by the voyager spacecraft they were sent back to earth and they look like points of light smeared or unsmeared depending on the angle of the light beam the earth seems to be sitting in a beam of light because of the reflection of sunlight off the spacecraft 4 the earth is a small stage in a vast cosmic arena we are a tiny part of the universe and there is no place for us to hide from the vastness of space
